## Foreword

THE FIFTH JOINT STATISTICAL PUBLICATION OF THE BRICS COUNTRIES 2014 is the result of annual joint efforts of National Statistical Offices (NSOs) of Brazil, Russia, India, China and South Africa since 2010 to disseminate several social and economic data statistics about these countries.

The select data was an issue agreed on the BRICS Leaders Meeting, held in Pretoria, in November 2013 and in the 6th Technical Meeting of NSOs in Rio de Janeiro, in February 2014.

This work is a challenge and each year the BRICS Countries get advances in the project to achieve its goal which is the harmonization of statistical information about the group.

Brazil will be host the first meeting of the second cycle of BRICS Summits and responsible to implement the activities of the Action Plan of the group for 2014-2015 period. Therefore the National Statistical Office of Brazil (IBGE) assumed the role of compiling, printing and distribution of the Fifth Joint Statistical Publication of the BRICS Countries and development a collaborative system to disseminate the statistics of the BRICS based in the publication in this first moment.

The present publication will be publishing in the Sixth BRICS Summit that will be held in July, 15th 2014 in Fortaleza City, Brazil.

The BRICS National Statistical Offices are certain that the joint development work will be an important tool for public policies and researchers.

**Footnotes**

1. Specific footnotes and sources of data may be seen from the respective chapters of the indicators.

**Brazil**

(1) Information about the mid-year population and demographic indicators were obtained by a projection of the population by sex and age groups by the component method.

(18) Gini Index of Household Income.

**Russia**

(7) Provisional data.

(15) In million tons of standard fuel (the volumes of natural fuels – oil, coal, gas, oil products etc., which have been recalculated for their own corresponding calorific coal equivalent into the volume of standard fuel).

(19) Data on Gini Index are based on per capita income data.

**India**

(2) As on 1st March 2011

(4) Based on survey ( Period October 2012 to May 2013) conducted by Labor Bureau, Ministry of Labor & Employment, as per Usual Principal Status taking into account subsidiary activity also.

(8) The information is as per the financial year i.e. during April of the current year to March of the next year.

(14) Provisional data.

(17) The information is as per agricultural year/National sample survey round (for Gini coefficient) i.e. July of the current year to June of the next year.

**China**

(3) Year-end population.

(5) Share of number of employed persons to national population.

(6) Registered Unemployment Rate in Urban Areas.

(9) GDP and Per Capita GDP in US dollars are converted using the annual average exchange rates.

(10) Data of GDP are calculated at producers' prices.

(11) Refers to government appropriation for education to GDP.

(12) Refers to total expenditure on health as percentage of GDP

(13) Refers only to Color TV.

(16) Electric power in total primary energy production and total consumption of energy are converted on the basis of equal caloric value.

(20) Data of Gini Coefficient are based on per capita annual disposable income.

**South Africa**

(21) Gini is *per capita* expenditure excluding taxes.

**Footnotes**

(1) The information pertaining to population is as on 1st march and is based on population projections incorporating the information of Census 2001 (except for 2000 which is based on the information from previous Census i.e. 1991). Actual data for 2011 on the basis of Census 2011 has also been released by Ministry of Home Affairs, Office of the Registrar General of India.

(2) Information on Life Expectancy at Birth pertains to 1998-2002,2002-2006,2006-2010. Projected Life Expectancy for 2011-2015 is 67.3 years for male and 69.6 years for female.

(3) Information on Maternal Mortality Ratio pertains to the period 1997-2001, 2004-2006, 2007-2009 and 2010-2012.

## Explanatory Notes

### General Notes

Crude Birth rate: Number of Births per 1000 population in a given year. This definition excludes fetal deaths.

Crude Death Rate: Number of Deaths per 1000 population in a given year.

Natural Increase in Population = Crude Birth Rate – Crude Death Rate

Total Fertility Rate (TFR): Average number of children that would be born to a woman if she experience the current fertility pattern throughout her reproductive span (15-49 year).

Expectation of live at birth: Average number of years' a new born child is expected to live undercurrent mortality conditions.

Infant Mortality Rate (IMR): Number of infants dying under one year of age in a year per 1000 live births of the same year.

Crude Divorce Rate refers to ratio of divorce couples to the annual average population for the reference year, the formula is:

$$\text{Crude divorce rate} = \frac{\text{Number of couples divorced for the reference year} \times 1000\%}{\text{Annual Average population}}$$

Dependency rate – number of people aged 0-15 and 60 and over to the population 15-59.

Census: A canvass of a given area, resulting in an enumeration of the entire population and often the compilation of other demographic, social and economic information pertaining to that population at a specific time.

### Brazil

Total Population (Mid-Year) - Information about the population in half of the year, was obtained by a projection of the population by sex and age groups by the component method. This method consists of working separately each component of population dynamics of the population; fertility, mortality and migration.

Sex ratio - expressed as the number of males for every 100 females. It is obtained from the ratio of the male and female populations by age group.

Crude Marriage Rate - The nuptiality rate is obtained by dividing the number of marriages of spouses 15 years of age or older by the population of this same age group multiplied by a thousand.

Crude Divorce Rate - The overall divorce rate is obtained by dividing the number of divorces by population aged 20 years or more multiplied by a thousand. Divorces granted without recourse or notary performed in people 20 years or older on the date of sentence and the population of the same age was considered.

Total fertility rate - The total fertility rate expresses the number of children who, on average, would a woman belonging to a hypothetical cohort of women during their fertile life that had their children according to the fertility rates by age study period and were not exposed to the risk of mortality from birth to the end of the fertile period.

Crude Birth Rate of Population - Represents the frequency with which occur births in a given population. It is the ratio of live births occurring in a given year and the mid-year population, by 1000.

Crude death rate - Represents the frequency with which deaths occur in a given population. It is the ratio of the deaths in a given year and the mid-year population by 1000.

Natural Increase Rate of Population - The rate of natural increase is obtained by the difference between the crude birth rates and mortality, both divided by 10.

Life expectancy at birth - is the average number of years that a newborn would expect to live from the moment of birth.

Infant mortality rate - The infant mortality rate is defined as the number of deaths of infants under one year of age (per thousand live births) in a given geographical area and time period, and is interpreted as the estimated risk of a born live to die during their first year of life.

Total Population (Mid-Year) - Information about the population in half of the year, was obtained by a projection of the population by sex and age groups by the component method. This method consists of working separately each component of population dynamics of the population; fertility, mortality and migration.

### Russia

The information on births, deaths, marriages and divorces is received on the basis of annual processing of data contained in the records of Civil Registrar Offices.

### India

Maternal Mortality Ratio (MMR) Refers to the number of women who die as a result of complications of pregnancy or childbearing in a given year per 100,000 live births in that year. This is different from Maternal Mortality Rate which is defined as the number of maternal deaths to women in the ages 15-49 per lakh of women in that age group.

Census in India is conducted at interval of ten years and the last census was conducted in 2011. The population projection for intercensal period and that for the future is based on Component Method using data from Census and Sample Registration System with the latter providing time series data on fertility and mortality. Accordingly population from 2005-12 provided in the tables is based on projections using 2001 census information while that for 2000 is based on 1991 Census as per the Report of Technical Committees of 2006 and 1996 respectively.

Census 2011 figures are also available and as per the same Population of India in 2011 was 1211 million. As per the Census 2011 the total population comprised of 378 Million Urban & 833 Million Rural Population and 625 Million Males & 586 Million Females).

The background consists of several overlapping circles in various shades of orange and red, creating a layered, abstract effect. The circles are semi-transparent, allowing the colors of the circles behind them to show through.

## Explanatory Notes

### General notes

<sup>1</sup> Economically Active Population (Labour Force): Persons who were either 'working' (or employed) or 'seeking or available for work' (or unemployed) constituted the labour force. This is for a particular reference period.

<sup>2</sup> Unemployment Rate (UR): UR is defined as the number of persons unemployed per 1000 in the labour force (which includes both employed and unemployed)

<sup>3</sup> Workers (or employed): Persons who were engaged in any economic activity or who, despite their attachment to economic activity, abstained from work for reasons of illness, injury or other physical disability, bad weather, festivals, social or religious functions or other contingencies necessitating temporary absence from work, constituted workers. Unpaid helpers who assisted in the operation of an economic activity in the household farm or non farm activities were also considered as workers.

<sup>4</sup> Activity status, Labour Force, Employment, Unemployment: It is the activity situation in which a person was found during a reference period with regard to the person to the person's participation in economic and non-economic activities. According to this, a person could be in one or a combination of the following three broad activity statuses during reference period:

- (i) Working or being engaged in economic activity (work)
- (ii) Being not engaged in economic activity (work) but either making tangible efforts to seek 'work' or being available for 'work' if 'work' is available and
- (iii) Being not engaged in any economic activity (work) and also not available for (work)

Broad activity statuses mentioned in (i) and (ii) above are associated with 'being in labour force' and the last with 'not being in the labour force'. Within the labour force, broad activity status (i) and (ii) were associated with 'employed' and 'unemployed' respectively.

### Brazil

Reference Week is the last complete week of September each year.

**Work** - It was considered as work in the exercise of economic activity:

- a) Occupation paid in cash, products, goods or benefits (housing, food, clothes etc.) in the production of goods and services:
- b) Occupation paid in cash or benefits (housing, food, clothes etc) in domestic services.
- c) Occupation without pay in the production of goods and services, performed at least one hour per week
  - Helping a member of the household who had work as: employee in the production of primary goods (which includes the activities of agriculture, forestry, livestock, vegetable or mineral extraction, hunting, fishing and fish farming): or own account or employer in any activity.
  - Helping in a religious, charitable or cooperative institute or
  - As apprentice or trainee, or
- d) Occupation developed for at least one hour per week:
  - In the production of goods, of the branch that includes the activities of agriculture, forestry, livestock, vegetal extraction, fishing and fish farming, for own consumption or for at least one member of household consumption, or
  - Construction of buildings, private roads, wells and other improvements (except only repairs work) for their own use or for the use of at least one member of the household.

**Employed Person** who performed some work during all or part of the reference week. It is also included as employed persons who have not exercised their paid work during the reference week due to vacation, leave, strike etc.

**Unemployed Person** without work which had taken specific action to seek work (getting in touch with employers; enrolling or going in for official examination for a government job; registration at employment agency, union or similar body, placing or answering job advertisement; seeking assistance of relative, friend or colleague; taking an action to start business; etc.) in the reference week.

### Russia

Data on economically active population are presented in accordance with the standards of the International Labour Organization. The number of economically active population includes data on employed and unemployed based on the results of employment population surveys. The monitoring of economically active population is carried out for persons of 15 - 72 years old.

### India

The National Sample Survey Office, Ministry of Statistics & Programme Implementation carries out survey on the subject of employment and unemployment and labour force characteristics at the National and State levels.

The Survey is conducted Quinquennially along with some annual surveys in between. The Reference Period is usually July to June. However some surveys were conducted in six months. The Report includes status based on Usual Activity (Reference Period 365 days), Current Weekly Status (Reference Period 7 days) & Current Daily Status (Reference Period 1 day).

**Usual Principal Activity Status** - The usual activity status refers to the activity status of a person during the reference period of 365 days preceding the date of the survey. The activity status on which a person spent relatively longer time during the 365 days is considered as the usual principal activity status of the person.

**Usual Subsidiary Economic Activity Status** - A person whose usual principal status was determined on the basis of the major time criterion could have pursued some economic activity for a shorter time throughout the reference year of 365 days preceding the date of survey or for a minor period, which is not less than 30 days, during the reference year. The status in which such economic activity was pursued was the subsidiary economic activity status of that person.

**Usual Activity Status Considering Principal and Subsidiary Status Taken Together** - The usual status, determined on the basis of the usual principal activity and usual subsidiary economic activity of a person taken together, is considered as the usual activity status of the person and is written as usual status (ps+ss). According to the usual status (ps+ss), workers are those who perform some work activity either in the principal status or in the subsidiary status. Thus, a person who is not a worker in the usual principal status is considered as worker according to the usual status (ps+ss), if the person pursues some subsidiary economic activity for 30 days or more during 365 days preceding the date of survey.

**Unemployed:** Persons, who owing to lack of work, had not worked but either sought work through employment exchanges, intermediaries, friends or relatives or by making applications to prospective employers or expressed their willingness or availability for work under the prevailing conditions of work and remuneration, were considered as those who were 'seeking or available for work' or unemployed

Labor Bureau, Ministry of Labor, has also started conducting Annual Surveys on Employment & Unemployment in India since 2010-11.

## China

**Employed Persons** refer to persons aged 16 and over who are engaged in gainful employment and thus receive remuneration payment or earn business income. This indicator reflects the actual utilization of total labour force during a certain period of time and is often used for the research on China's economic situation and national situation.

**Registered Unemployed Persons in Urban Areas** refer to the persons with non-agricultural household registration at certain working ages (16 years old to retirement age), who are capable of working, unemployed and willing to work, and have been registered at the local employment service agencies to apply for a job.

**Registered Unemployment Rate in Urban Areas** refers to the ratio of the number of the registered unemployed persons to the sum of the number of persons employed in various units (minus the employed rural labour force, re-employed retirees, and Hong Kong, Macao, Taiwan or foreign employees), laid-off staff and workers in urban units, owners of private enterprises in urban areas, owners of self-employed individuals in urban areas, employees of private enterprises in urban areas, employees of self-employed individuals in urban areas, and the registered unemployed persons in urban areas.

The annual average exchange rates used are available in Tables 13.2.1 and 14.1.

(1) Data for 2010, 2011, 2012 and 2013 are derived from quarterly GDP results.

(2) Data of 2010, 2011, 2012 and 2013 are preliminary estimation.

**Russia**

(3) Data for 2012 and 2013 are preliminary.

**India**

All Information for India pertains to Financial Year i.e. April of Year mentioned in the table above to March of next year. Information for GDP and per capita GDP pertains to current market price.

Annual average Dollar - Rs Exchange Rate for the Financial Year has been used in all calculations.

Data for 2000 relates to old base year 1999-2000 Prices while that for 2006 and onwards relates to new base year 2004-05 Prices.

Data for 2013 is Advance Estimate whereas that for 2012, 11 & 10 are first, second and third revised estimates respectively.

(7) GDP at Factor Cost, Current Prices has been used for calculating GDP Growth Rate.

(8) Primary Industry includes Agriculture, Forestry & Fishing and Mining & Quarrying. The share of GDP relates to factor cost at current prices.

(9) Secondary Industry includes Manufacturing, Electricity Gas & Water Supply and Construction. The share of GDP relates to factor cost at current prices.

(10) Tertiary Industry includes other industries of national economy. The share of GDP relates to factor cost at current prices.

**China**

(4) GDP and Per Capita GDP in US dollars are converted using the annual average exchange rates.

(5) Data of GDP are calculated at producers' prices.

(6) Preliminary data.

## Explanatory Notes

### General

National product by definition is a measure in monetary terms of the volume of all goods and services produced by an economy during a given period of time, accounted without duplication. The measure obviously has to be in value terms as the different units of production and different measures of services are not directly added. In the case of a closed economy the measure amounts to domestic product. (Gross Domestic Product)

### Gross National Income (GNI)

The economy of India is not closed as there are transactions with rest of the world in the form of exports, imports, loans etc. This gives rise to the concept of national or domestic. Gross Domestic Product refers to production of all resident units within the borders of a country, which is not exactly same as the production of all productive activities of residents. Some of the productive activities of residents may take place abroad. Conversely, some production taking place within a country may be attributed to temporary and seasonal foreign labour.

$GNI = GDP + \text{compensation of employees and property income receivable from the rest of the world} - \text{compensation of employees and property income payable to the rest of the world}$

The household consumption expenditure referred to as private final consumption expenditure (PFCE) in National Accounts Statistics (NAS), consists of expenditure by households (including non-profit institutions) on non-durable consumer goods and services and all durable goods except land and buildings.

### Government final consumption expenditure

Government final consumption expenditure comprises the compensation of employees and purchases of goods and services by the government including purchases abroad. Compensation of employees of general government consists of wages and salaries and social security contribution.

**Primary Industry** Agriculture, Forestry, Animal Husbandry and Fishery and Mining.

**Secondary Industry** Manufacturing, Electricity, gas and water and Construction.

**Tertiary Industry** The other industries of national economy.

### Brazil

**Expenditure measure of GDP** The expenditure measure of gross domestic product (GDP) is derived as the sum of expenditure on final consumption plus gross capital formation plus exports less imports.

**Gross fixed capital formation** in a particular category of fixed asset consists of the value of producers' acquisitions of new and existing products of this type less the value of their disposals of fixed assets of the same type.

**Gross fixed capital formation** is measured by the total value of a producer's acquisitions, less disposals, of fixed assets during the accounting period plus certain specified expenditure on services that adds to the value of non-produced assets.

**Gross capital formation** shows the acquisition less disposal of produced assets for purposes of fixed capital formation, inventories or valuables.

**Expenditures on goods and services** are defined as the values of the amounts that buyers pay, or agree to pay, to sellers in exchange for goods or services that sellers provide to them or to other institutional units designated by the buyers.

**Goods and services account** The goods and services account shows the balance between the total goods and services supplied as resources to the economy as output and imports (including the value of taxes less subsidies on products not already included in the valuation of output) and the use of the same goods and services as intermediate consumption, final consumption, capital formation and exports.

**Final consumption expenditure** is the amount of expenditure on consumption goods and services.

Household final consumption expenditure consists of the expenditure, including expenditure whose value must be estimated indirectly, incurred by resident households on individual consumption goods and services, including those sold at prices that are not economically significant and including consumption goods and services acquired abroad.

General government final consumption expenditure consists of expenditure, including expenditure whose value must be estimated indirectly, incurred by general government on both individual consumption goods and services and collective consumption services.

Final consumption expenditure of NPISHs consists of the expenditure, including expenditure whose value must be estimated indirectly, incurred by resident NPISHs on individual consumption goods and services and possibly on collective consumption services.

**Inventories** are produced assets that consist of goods and services, which came into existence in the current period or in an earlier period, and that are held for sale, use in production or other use at a later date.

**Primary Industry:** Agriculture, Forestry, Animal Husbandry and Fishery.

**Secondary Industry:** Mining, Manufacturing, Electricity, Gas and Water and Construction.

**Tertiary Industry:** The other industries of national economy.

## Russia

**Primary Industry:** Agriculture, Forestry, Animal Husbandry and Fishery.

**Secondary Industry:** Mining, Manufacturing, Electricity, Gas and Water and Construction.

**Tertiary Industry:** The other industries of national economy.

**Gross Domestic Product (GDP)** at market prices is the final result of the production activity of all producer units within a country area. It may be estimated using three methods: production, use of incomes (or expenditure method) and GDP formation by income sources. GDP, measured by production method, is defined as a difference between total output of goods and services for the whole economy, on the one hand, and intermediate consumption, on the other, or otherwise as a sum of value added in the sectors of the economy. GDP, measured by the method of use of incomes, represents a sum of expenditures of all the institutional units – residents for final consumption, gross capital formation and net exports. GDP calculated on the basis of income sources reflects primary incomes accumulated in the process of production by all institutional units grouped by sectors of the economy.

**Final consumption expenditures** comprise final consumption expenditures of households, final consumption expenditures of public administration on individual goods and services and collective services, final consumption expenditures of non-profit institutions serving of households.

**Gross Capital Formation** indicates net acquisition by resident units of goods and services produced in the current period or imported, but not consumed in that period. Gross capital formation includes gross fixed capital formation, changes in inventories, as well as net acquisition of valuables.

**Net Exports of Goods and Services** are calculated as a difference between exports and imports and include trade turnover of Russia with foreign countries.

## India

Central Statistics Office(CSO) in the Ministry of Statistics & PI compiles estimates of national accounts aggregates and publishes them in its annual publication called National Accounts Statistics. The estimates are based on performance during the Financial year ( April- March (next year)). CSO brings out Quick Estimates in January for the preceding year along with revision of estimates for a few earlier financial years using detailed and more comprehensive data. CSO also compiles Advance Estimates for the current financial year and releases it two months before the close of the year. Various indices brought out by CSO include GDP, NDP, GNP, and NNP at factor cost and market prices, indirect taxes less subsidies, Consumption of Fixed Capital, Net National Disposable Income, Personal Disposable Income, Private Final Consumption Expenditure (PFCE) in the domestic market, Government Final Consumption Expenditure (GFCE), exports and imports, Gross Domestic Capital Formation, Net Domestic Capital Formation, Savings etc.

The economy of India is not closed as there are transactions with rest of the world in the form of exports, imports, loans etc. This gives rise to the concept of national or domestic. Gross Domestic Product refers to production of all resident units within the borders of a country, which is not exactly same as the production of all productive activities of residents. Some of the productive activities of residents may take place abroad. Conversely, some production taking place within a country may be attributed to temporary and seasonal foreign labour.

$GNI = GDP + \text{compensation of employees and property income receivable from the rest of the world} - \text{compensation of employees and property income payable to the rest of the world}$

**Final consumption Expenditure** includes both Private Final Consumption Expenditure & Government Final Consumption Expenditure

**Private Final Consumption Expenditure:**The household consumption expenditure referred to as private final consumption expenditure (PFCE) in National Accounts Statistics (NAS), consists of expenditure by households (including non-profit institutions) on non-durable consumer goods and services and all durable goods except land and buildings.

**Government final consumption expenditure** Government final consumption expenditure comprises the compensation of employees and purchases of goods and services by the government including purchases abroad. Compensation of employees of general government consists of wages and salaries and social security contribution.

**Final Consumption Rate** is total Final Consumption expenditure expressed as percent of Gross Domestic Product at Market Prices (Current Prices)

**Gross Capital Formation Rate** is total Gross Capital Formation expressed as percent of Gross Domestic Product at Market Prices (Current Prices)

Following categorization has been used for industrywise GDP estimates in case of India :

**Primary Industry** Agriculture, Forestry, Animal Husbandry and Fishery and Mining & Quarrying.

**Secondary Industry** Manufacturing, Electricity, gas and water and Construction.

**Tertiary Industry** The other industries of national economy.

## China

**Gross Domestic Product (GDP)** refers to the final products at market prices produced by all resident units in a country (or a region) during a certain period of time. In the practice of national accounting, GDP is calculated from three approaches, namely production approach, income approach and expenditure approach, which reflect GDP and its composition from different angles.

**Per Capita GDP** = GDP / annual average population.

**Three Strata of Industry** In China economic activities are categorized into the following three strata of industry: Primary industry refers to agriculture, forestry, animal husbandry and fishery and services in support of these industries. Secondary industry refers to mining and quarrying, manufacturing, production and supply of electricity, water and gas, and construction. Tertiary industry refers to all other economic activities not included in the primary or secondary industries.

**Indices of GDP** measure the change of GDP at constant prices. GDP at constant prices converts GDP based on the current price into a value based on the price of the base period. When adjusted for price changes, the values of two different periods can be compared to reflect changes of both products and production activities.

**GDP by Expenditure Approach** refers to the method of measuring the final results of production activities of a country (region) during a given period from the perspective of final uses. It includes final consumption expenditure, gross capital formation and net export of goods and services. The formula for computation is: GDP by expenditure approach = final consumption expenditure + gross capital formation + net export of goods and services.

**Final Consumption Expenditure** refers to the total expenditure of resident units for purchases of goods and services from both the domestic economic territory and abroad to meet the needs of material, cultural and spiritual life. It does not include the expenditure of non-resident units on consumption in the economic territory of the country. The final consumption expenditure is broken down into household consumption expenditure and government consumption expenditure.

**Gross Fixed Capital Formation** refers to the value of acquisitions less those disposals of fixed assets during a given period. Fixed assets are the assets produced through production activities with unit value above a specified amount and which could be used for over one year. Natural assets are not included.

Gross fixed capital formation can be categorized into total tangible fixed capital formation and total intangible fixed capital formation. Total tangible fixed capital formation includes the value of the construction projects and installation projects completed and the equipment, apparatus and instruments purchased (less those disposed) as well as the value of land improved, the value of draught animals, breeding stock and animals for milk, for wool and for recreational purposes and the newly increased forest with economic value. Total intangible fixed capital formation includes the prospecting of minerals and the acquisition of computer software minus the disposal of them.

**Changes in Inventories** refer to the market value of the change in the physical volume of inventory of resident units during a given period, i.e. the difference between the values at the beginning and at the end of the period minus the gains due to the change in prices. The changes in inventories can have a positive or a negative value. A positive value indicates an increase in inventory while a negative value indicates a decrease in inventory. The inventory includes raw materials, fuels and reserve materials purchased by the production units as well as the inventory of finished products, semi-finished products and work-in-progress.

**Net Export of Goods and Services** refers to the exports of goods and services subtracting the imports of goods and services. Exports include the value of various goods and services sold or gratuitously transferred by resident units to non-resident units. Imports include the value of various goods and services purchased or gratuitously acquired resident units from non-resident units. Because the provision of services and the use of them happen simultaneously, the acquisition of services by resident units from abroad is usually treated as import while the acquisition of services by non-resident units in this country is usually treated as export. The exports and imports of goods are calculated at FOB.

**Final Consumption Rate** refers to final consumption expenditures as percentage of gross domestic product by expenditure approach.

**Gross Capital Formation Rate** refers to gross capital formation as percentage of gross domestic product by expenditure approach.

## South Africa

Base year 2005=100

Primary industries = Agriculture, forestry and fishing and Mining and quarrying

Secondary industries = Manufacturing; Electricity, gas and water and Construction

Tertiary industries = Wholesale, retail and motor trade, catering and accommodation; Transport, storage and communication; Finance, real estate and business services. General government and Personal services.

# Price Indices

1. Break in series, all indices prior to 2008 not official indices. Linking factors used to calculate continuous time series. Linking factors: All items; Urban Area; Rural Area; Housing Indices; Food Indices; Electricity; Clothing Indices; Rent Indices.

(1) Base year = December 2012 = 100.

(2) All items headline measure from 2000 to 2008 based on primary areas, currently based on primary and secondary areas.

(3) Includes all housing, i.e. rental, owners equivalent rent, utilities and maintenance. Electricity excluded (2000-2007). Change in method of calculation in owner-occupied housing from 2008.

(4) Food only (does not include non-alcoholic beverages).

(5) Includes electricity and other solid and liquid fuels.

(6) Included under electricity and other fuels.

(7) Year 2000 = 100.

(8) Discontinued in December 2012

(9) Introduced in January 2013, history starts from January 2012. Base year 2012=100

## Explanatory Notes

### General

The retail price is defined as money cost to the consumer of a specified unit of sale which is inclusive of all rebates, discount etc.

**Consumer Price Indices (CPI)**, the retail price indicates time fluctuations of prices on goods and services purchased by the consumers for non production consumption within a specified period of time. It measures a ratio of value of a fixed basket of main goods and services at the prices of the current period as related to its value at the prices of the base period. CPI is calculated monthly on the basis of statistical data collected while observing price changes in retail trade and service establishments and also in commodity, mixed and food market and as well as on data of actual structure of consumer expenditures of households for the previous year.

**Producer Price Indices:** It represent bulk transaction generally at the early stage of trading. The price pertaining to bulk transactions may have divergent nomenclatures e.g. farm harvest prices, wholesale prices, procurement prices, support prices, administered prices, import prices, forward prices etc. Wholesale price index relates to the transactions at the primary stage which broadly correspond to producer prices.

### Brazil

The Brazilian Institute of Geography and Statistics (IBGE) is the government organisation responsible for the computation of the Extended National Consumer Price Index (IPCA), which is the official and main inflation indicator of the country. IPCA is used by the Central Bank to monitor objectives set in the inflation goals system. The index is computed on a monthly basis and refers to families inhabiting in urban localities, with monthly income, from any source, ranging from 1 (one) to 40 (forty) minimum wages. The geographical coverage of the index encompasses 9 metropolitan regions, Goiânia city and Brasília (Brazil's capital), which represents 37% of the Brazilian's urban population, according to the 2010 census.

### Russia

Consumer Price Indices (CPI) indicates time fluctuations of prices on goods and services purchased by the consumers for non production consumption within a specified period of time. It measures a ratio of value of a fixed basket of main goods and services at the prices of the current period as related to its value at the prices of the base period. CPI is calculated monthly on the basis of statistical data collected while observing price changes in retail trade and service establishments and also in commodity, mixed and food market and as well as on data of actual structure of consumer expenditures of households for the previous year (before 2013 year), since 2013 year - for 2 previous years.

CPI is computed for the urban population and it is diffused for the whole population.

Producer Price Indices (PPI) for Industrial Goods are compiled on the basis of recording prices for representative goods produced by 8 thousand basic (key) organisations covered by the survey. Average prices and price indices are calculated for more than 800 (since 2010 year-1000) representative goods. Producer prices are actual prices for produced goods provided for selling on the domestic market (except indirect taxes). PPI calculated for representative goods shall be gradually aggregated into indices of corresponding types, kinds, classes, divisions of economics activities. Data on the volume of production in value terms of the base period are being used as the weight factors.

### India

Consumer Price Index Numbers for Industrial workers measure a change over time in prices of fixed basket of goods and services consumed by Industrial Workers. These index numbers are utilized for regulation of wages and dearness allowances of millions of employees and workers in the organised sector. It also serves as an indicator of retail prices in the country and is used for formulation of wages and interest policies. The Labour Bureau, an attached office of the M/o Labour & Employment, has been compiling and disseminating Consumer Price Index for industrial worker since its inception in the year 1946.

This index series till 2005 was based on 1982=100. A new series on base: 2001=100 has been released w.e.f January, 2006. The data on Consumer Expenditure have been obtained from an ad-hoc survey "family Income and Expenditure Survey" conducted during September 1999 to August 2000 in respect of 78 selected centers by the NSSO on behalf of Labour Bureau. These 78 centres were selected on the basis of their industrial importance in the country and distributed among different states in proportion to the Industrial employment in the State subject to a maximum allotment of 5 centres per state per sector. On the basis of the results thrown up by the survey, the weighing diagrams have been derived in respect of 78 constituent's centers All-India. The indices are compiled by using price data collected on monthly basis and house rent survey data on half yearly basis. The CPI (IW), centrewise and at all India levels is released monthly with time lag of one month (on the last working day of the following month).

Index Number of Wholesale Prices in India is compiled by Office of Economic Adviser, Ministry of Commerce & Industry. The present series has 2004-05 as the base year and the data is released weekly. It is the most commonly used measure of Inflation in India. Item Basket and the weighting diagram is based on Gross Value of Output as obtained from National Accounts Statistics 2007. Seasonal Items have also been included and when they disappear their weight is distributed over remaining items in the sub group on a pro rata basis. Unlike 1993-94 series, in the new series, instead of Public Distribution System prices of Paddy and wheat their procurement prices have been included to correctly represent the first point of sale.

The existing series is based on ex-factory/ex-mine prices in respect of the manufactured items. In the case Agricultural commodities, however the prices as quoted in primary wholesale markets are used. The collection of price data is through correspondence & self filing of information. Various units submit the prices electronically through online forms.

Index is compiled on the principle of weighted arithmetic mean according to the Laspeyre's formula, which has fixed base year weights operating through the entire life span of the series.

**China**

**Consumer Price Indices** reflect the trend and degree of changes in prices of consumer goods and services purchased by urban and rural households during a given period. They are obtained by combining consumer price indices of urban household and consumer price indices of rural household. The indices enable the observation and analysis of the degree of impact of the changes in the prices of retail goods and services on the actual living expenses of urban and rural residents.

**Producer Price Indices** for Industrial Products reflect the trend and degree of changes in general exfactory prices of all industrial goods during a given period, including sales of industrial goods by an industrial enterprise to all units outside the enterprise, as well as sales of consumer goods to residents. It can be used to analyze the impact of ex-factory prices on gross output value and value-added of the industrial sector.

**South Africa**

Break in series, all indices prior to 2008 not official indices. Linking factors used to calculate continuous time series. Linking factors: All items; Urban Area; Rural Area; Housing Indices; Food Indices; Electricity; Clothing Indices; Rent Indices.

# People's Living Standard

6

**Footnotes****Brazil**

- (5) The data for Brazil refer to vehicles per 100 persons.
- (9) Revised data, according to the last population estimate.
- (10) Employed population 15 years and older with work income.
- (19) Gini Index of Household Income.

**Russia**

- (1) All type TV sets. Per 100 households. By data of sample household budget survey.
- (6) Personal passenger cars.
- (12) Estimates on the base of the data of the Federal Treasury. Since 2005 year including budgets of the state non-budget funds.
- (13) Provisional data.
- (17) Before 2011 year data include expenditures on physical culture and sport.
- (20) Data on Gini Index are based on *per capita* income data.

**India**

- (2) Figure for 2000 , 2011(Census) & 2013(estimated) are as on March of the year & that for 2006 is based on National Family Health Survey 3, December 2005 to August 2006. All information is per 100 households
- (3) Estimated data.
- (7) Figures have been derived by dividing No. of registered vehicles as on 31st March of the year indicated in the table (Except for 2000 where the data is as on 31st March 2001) by mid year population.
- (14) Information pertains to Financial Year (i.e. April of Year indicated in the table to March next year) and it relates to Expenditure of general government (i.e. Centre and State Combined)
- (21) Gini coefficient of household consumption has been calculated on the basis of National Sample Survey Periods (i.e. July 1999-June 2000, July 2004-June 2005 & July 2009-June 2010) and is based on Mixed Recall Period.

**China**

- (4) In the fourth quarter of 2012, the National Bureau of Statistics of the People's Republic of China conducted the integrated survey of urban and rural households, unifying the names, classification and statistical standards of urban and rural households. On its basis, we got the ownership data of resident in China, including the number of colour TV sets, cars and personal computers etc.
- (8) In rural household survey of China, cars refer to the automobiles for living use, including vans.
- (11) Average annual wage of staff and workers refers to the average wage level in monetary terms per staff and worker during a year of time.
- (16) Government appropriation for education to GDP.
- (18) Total expenditure on health as percentage of GDP.
- (22) Data of Gini Coefficient are based on *per capita* annual disposable income.

**South Africa**

- (23) Gini is *per capita* expenditure excluding taxes.

**Footnotes**

- Pertains to National Sample Survey Rounds (i.e. Period July of the previous year to June of the year mentioned in the table).
- Information pertains to Financial Year (i.e. April of Year indicated in the table to March next year). Expenditure on health & education relates to Expenditure of general government (i.e. centra & state combined).
- Preliminary data.
- Estimated data.
- As on end of December of the year indicated in the table. The data relates to number of doctors registered with State Medical Council/Medical Council
- Includes deaths due to traffic accidents, air crash, fire, poisoning, electrocution etc.
- Information is based on Census and is as on 31<sup>st</sup> March.
- Information on expenditure pertains to mixed reference period.
- Illiteracy Rate pertains to age 7 years and above.

## Explanatory Notes

### Brazil

**Wage** - it was considered the monthly wage usually received in the reference month (September of each year)

**a) Employees:** the wage was the gross monthly income that would normally be entitled to the whole working month and, when the income was variable, it was the average monthly income for the month of reference of the survey year. It were not included 13th salary (14th salary and 15th salary etc.) and profit-sharing paid by the enterprise to their employees. Also the amount received in benefits (housing, food, clothing, transport, meal or food stamps etc.) was not included in the calculation of the income of the employees.

**b) Employers and own account:** the income was the withdrawal usually made monthly or, when the gains was variable, the average monthly withdrawal for the month of reference of the survey year. The withdrawal was the gain (gross income less expense incurred with the enterprise, such as paying employees, raw material, electricity, telephones etc.). It was not included the value of the production of the enterprise used for own consumption.

### Russia

**Growth Rate (Index) of Real Wages** - relative indicator which is calculated by dividing the indices of accrued wage by consumer price indices for respective period of time. Average nominal accrued wage are compiled by dividing accrued wages fund of employees by average annual payroll number of employees. The accrued wages fund of employees includes sums of payments added to employed in the monetary and not monetary forms for fulfilled and unfinished time, the compensatory payments connected with working conditions, surcharges and extra charges, bonuses, occasional incentive payments and also payments of meal and residing, having regular character. Benefits granted to the employees from the state social extra-budget funds are not included in the wages fund.

**Number of Physicians** include all doctors with the higher medical education engaged in the treatment and sanitary organizations, social security establishments, research institutes, personnel training establishments, in public health management bodies and others.

**Hospital Beds** are the beds equipped with the required appliances and ready to receive patients.

**Area of Parks and Green Land** includes area of the common using green plantations (parks, gardens, squares and parkways) forest parks and city gardens.

**Gini Index** characterizes the level of deviation of the actual distribution of the income of population from the line of the even distribution.

### India

**Gini Coefficient:** Gini Coefficient in case of India is calculated by Planning Commission of India on the basis of Consumer Expenditure data (expenditure is used as proxy for income to measure inequality) compiled by National Sample Survey Office. The Gini Coefficient is produced both for uniform reference period and mixed reference period. The information included is based on mixed reference period i.e. different recall periods for different items.

### China

**Government Appropriation for Education** refers to state budgetary fund for education, taxes and fees collected by governments at all levels that are used for education purpose, education fund for enterprise-run schools, income from school-run enterprises, work-study programme and social services that are used for education purpose.

**Percentage of Urban Population with Access to Gas** refers to the ratio of the urban population with access to gas to the total urban population at the end of the reference period. Urban Green Areas per Capita refers to the ratio of the urban green areas to the total urban population. Area of Urban Green Areas refers to the total area occupied for green projects at the end of the reference period, including park green land, protection green land, green land attached to institutions and other green land.

**Regular Institutions of Higher Education** refer to educational establishments set up according to the government evaluation and approval procedures, recruiting graduates from senior secondary schools as the main target by National Matriculation TEST. They include full-time universities, colleges, institutions of higher professional education, institutions of higher vocational education, institutions of higher vocational education and others (non-university tertiary, branch schools and undergraduate classes), including total enrollment in full undergraduate courses and in specialized courses.

**Regular Secondary Schools** are classified into regular senior secondary schools and junior secondary schools, including: Regular Senior Secondary School referring to education establishment providing senior secondary education service to graduates of junior secondary school; Regular Junior Secondary School referring to education establishment providing fundamental secondary education service to graduates of primary school;

**Vocational Secondary Schools** include vocational junior secondary school and vocational senior secondary school, referring to education establishment ratified by education authority at county level or above to enroll graduates of primary school and junior secondary school and provide junior or senior vocational education service.

**Regular Primary Schools** refer to education establishments ratified by education authority at county level or above to children of school age and provide primary education service.

**Special Schools** refer to regular or vocational primary or secondary education institutions enrolling children with physical or intellectual disabilities and other special children and teenagers that have demand for special education.

**Pre-Primary Education Institutions** include kindergarten and preschool class. Kindergarten enrolls three-year-old (and above) preschool children and provides care and education service. Establishment of kindergarten shall be approved by education authority at county level or above or town government, and shall be registered in file. In those regions without the resources of providing three year preschool education to preschool children, one-year preschool class can be set up to provide one-year preschool education service to preschool children.

**Physicians** refer to licensed (assistant) doctors. Licensed assistant doctors refer to the medical workers who have obtained the licenses of qualified (assistant) doctors and are employed in medical treatment, disease prevention or healthcare institutions, excluding the licensed (assistant) doctors engaged in management job. The classification of licensed (assistant) doctors is clinician, Chinese medicine, dentist and public health.

**Number of Licensed (Assistant) Doctors per 1000 Population** The formula is: Number of Licensed (Assistant) Doctors per 1000 Population = (Number of Licensed Doctors + Number of Licensed Assistant Doctors) / Population \*1000. The population is the figure of household registration from the Ministry of Public Security.

**Number of Beds of Hospitals and Health Care per 1000 Population** = (Number of Beds of Hospitals + Number of Beds of Health Care) / Population \*1000. The population is the figure of household registration from the Ministry of Public Security.

**Footnotes****Brazil**

(4) Data in concentration ( $\text{g}/\text{m}^3$ ) for some metropolitan areas (Recife, Salvador-Camaçari, Belo Horizonte, Vitória, Rio de Janeiro, São Paulo, Curitiba, Porto Alegre and Distrito Federal) no weighting by population.

**Russia**

(2) By data of Rosgidromet. Data on carbon dioxide emissions, with the account of land use, changing in land use and forestry are taken from the Russian national inventory of antropogenic emissions by sources and absorption by absorbents of greenhouse gases not regulated by Montreal Protocol for 1990-2007. (5) Emissions from stationary sources.

**India**

(1) Data (except 2011) relates to agricultural year (i.e. July of the year indicated in the table to June next year). Information since 2006-07 is provisional and that for 2011 is based on Estimation by Forest Survey of India.

(3) Per Capita Carbon Di Oxide Emission pertains to emission by fuel combustion using sectoral approach. The figure including Land Use Change & Forestry was 0.7 MT in 2000 and 1.08 in 2007 as per 'India Second National Communication to the United Nations Framework Convention on Climate Change', Ministry of Environment & Forests.

**China**

(6) Data of sulfur dioxide emissions per capita refer to the ratio of the volume of sulphur dioxide emission to the average population of the year.

**Footnotes**

- The data are constant estimates based on studies conducted by Central Water Commission on Reassessment of water resources.
- Includes both terrestrial and marine protected areas. The information is as on 31st December except for 2011 where it is as on September 2011 and 2012 where it is as on February 2013.
- Includes National Parks, Wild Life Sanctuaries, Conservation Reserves & Community Reserves.
- As on 31st March/1st April.
- Expenditure on environment is as per financial year (i.e. April of the year indicated in the table to March next year) and GDP estimate is based on current market price.

Footnote: It was established 2010 as the last year of data update, because only this year shows the data for all BRICS countries.

## Explanatory Notes

### Brasil

**Fresh Water Resources** - Historical Average 214 361 is the best information available until 2012.

**Sulfur Dioxides Emissions per Capita** - Data in concentration (g/m<sup>3</sup>) for some metropolitan areas (Recife, Salvador-Camaçari, Belo Horizonte, Vitória, Rio de Janeiro, São Paulo, Curitiba, Porto Alegre and Distrito Federal) no weighting by population.

### India

**Per Capita Carbon Di Oxide Emission:** This has been derived by dividing total carbon di oxide emission by mid year population. Figures indicating net carbon di oxide emission (including removal) with land use change and forestry are occasionally communicated to United Nations Framework Convention on Climate Change by Ministry of Environment & Forests. Time series information included however relates only to emission by fuel combustion using sectoral approach as provided by International Energy Agency.

### China

**Total Water Resources** refer to total volume of water resources measured as run-off for surface water from rainfall and recharge for groundwater in a given area, excluding transit water.

**Natural Reserves** refer to certain areas of land, waters or sea that are representative in natural ecological systems, or are natural habitats for rare or endangered wild animals or plants, or water conservation zones, or the location of important natural or historic relics, which are demarked by law and put under special protection and management. Natural reserves are designated by the formal approval of governments at and above county level. Scenic spots and cultural preservation zones are not included.

**Investment in the Treatment of Environment Pollution** refers to the proportion of investment in fixed assets in the total investment in harnessing industrial pollution and in the construction of urban environment infrastructure facilities. It includes investment in harnessing sources of industrial pollution, investment in environment protection facilities designed concurrently with construction projects, and investment in urban environment infrastructure facilities.

### Russia

**Freshwater Resources** include internal renewable freshwater resources (river flows and groundwater from rainfall in the country).

**Annual Fresher Water Withdrawals** are water withdrawals, not counting losses from storage basins.

**Industry**

Federal State Statistics Service of the Russian Federation.

**Footnotes**

(1) Preliminary data.

(2) Since 2010 - concentrate of iron ore.

(3) Household refrigerators and freezers.

(4) In terms of 100% content of nutrients.

(5) Since 2010 - mineral and chemical fertilizers.

(6) Including sleepers. Since 2009 - wood, sawn or chipped lengthwise, sliced or peeled, of a thickness exceeding 6 mm; railway or tramway sleepers of wood, not impregnated.

(7) Since 2010 - portland cement, aluminous cement, slag cement and similar hydraulic cements.

**Table 8.2.3 - Selected Data on Output of Main Industrial Products - India - 2000/2012**

Products	2000	2005	2006	2007	2008	2009	2010	2011	2012

## Explanatory Notes

### Brazil

The reported data on Output of Main Industrial Product reflect production by manufacturing units with more than 30 employees.

Production of Mobile Cellular Subscriptions reflects the national production of mobile celular.

### Russia

Index of industrial production - the aggregate index by kinds of economic activities "Mining and quarryng", "Manufacturing", "Electricity, gas and water production and supply". Data are given with the account of adjustment for informal activity.

### India

Index of Industrial Production is a simple weighted arithmetic mean of production relatives, the weights being proportional to gross value of output as available from ASI factory sector. At the industry indicator levels, the weights were allocated in proportion to their gross value of output.

The new series of All India Index of Industrial Production (IIP) with base 2004-05 has a broader coverage of 682 items (clubbed in 399 item groups: Mining-1, Manufacturing – 397, Electricity – 1) comprising 61 from Mining & Quarrying, 620 from Manufacturing and 1 from Electricity Sector having the weight age of 14.16%, 75.53% and 10.32% respectively in the all-India IIP. National Industrial Classification (NIC)-2004 is being followed.

### China

**Industrial Production Index in China** refer to the indices of the PPI-deflated value added of industry (% to the previous year) covering industrial enterprises above the designated size. Industrial enterprises above the designated size refer to those with annual revenue from principal business over 20 million yuan from 2011 on and over 5 million yuan prior to 2011.

**Sawnwood** refers to manufactured woods using wood sawing machine or manual tools to process log into formation of wood of certain width and thickness of sectional dimensions along longitudinal direction.

**Energy**

**Footnotes****Brasil**

(1) Primary Energy Production: includes natural gas rejected and non-utilized.

(5) Total Consumption: includes sectorial final energy consumption; losses in transformation, distribution and storage; and energy sector final consumption.

(7) Energy Consumption per capita = total consumption/population.

(12) Electricity consumption per capita not includes energy consumption in energy sector and losses.

**Russia**

(2) In million tons of standard fuel (the volumes of natural fuels – oil, coal, gas, oil products etc., which have been recalculated for their own corresponding calorific coal equivalent into the volume of standard fuel).

(8) Tons of standard fuel.

**India**

Information pertains to Financial Year (i.e. April of the year indicated in the table to March next year). Conversion factors have been used for providing data in Oil Equivalents.

(3) Primary Energy does not include thermal electricity.

(6) Includes Energy from coal, crude petroleum & natural gas & electricity (hydro, nuclear & thermal).

(13) (Gross Generation + Net Imports) / Mid Year Population. Figure for 2012 is provisional.

(14) Estimated from per capita consumption at the end of 8th and 9th Plan i.e. March 1997 & March 2002.

**China**

(4) Electric power in total primary energy production and total consumption of energy are converted on the basis of equal caloric value.

(9) Energy consumption per capita is calculated by annual average population.

**South Africa**

(10) Physical energy flowing out of South Africa as measured by the metering system at the South African borders.

(11) Physical energy flowing into South Africa as measured by the metering system at the South African borders.

Table 9.2 - Energy Balance - Brazil, Russia, China - 2012

## Footnotes

**Brazil**

(1) Primary Energy Production includes natural gas rejected and non-utilized.

(2) Electricity includes hydro, uranium and wind.

(3) Exports include bunkers.

(10) Balance includes only natural gas rejected and non-utilized. It is calculated from other data in the table.

(11) Consumption per capita = total consumption / population.

(12) Total Consumption includes sectorial final energy consumption; losses in transformation, distribution and storage; and energy sector final consumption.

**Russia**

(4) In million tons of standard fuel (the volumes of the natural fuels – oil, coal, gas, oil products etc. which have been recalculated for their own corresponding calorific coal equivalent).

(5) Coal, fuel peat ( conditional humidity), fuel wood.

(6) Oil extracted including natural gas liquids (NGL), products of fuel processing, combustible (fuel) supplementary energy resources.

(7) Electricity and heat.

(13) Tons of standard fuel.

**China**

(8) Primary Energy Production - Solids refer to coal. Liquids refer to petroleum. Gas refers to natural gas. Electricity refers to hydro power, nuclear power and electricity generated by other means such as wind power and geothermal power.

(9) Data on imports and exports are from Customs statistics. The refueling by Chinese ships and airplanes abroad is included in imports. The refueling by foreign ships and airplanes in China is included in exports.

**Table 9.2.1 - Summary of Energy - Brazil - 2000/2012**

	2000	2005	2006	2007	2008	2009	2010	2011	2012

**Source**

Ministry of Mines and Energy of Brazil. *Brazilian Energy Balance 2013*.

**Footnotes**

- (1) Consumption of crude petroleum - refinery oil in put.  
(2) Consumption of petrol - only motor gasoline (not includes alcohol and biodiesel).  
(3) Electricity Consumption - not include energy consumption in energy sector and losses.  
(4) Energy production from thermal - includes oil products, natural gas, industrial gas, coal and biomass.

## Explanatory Notes

### Brazil

**Consumption of crude petroleum:** refinery oil in put.

**Consumption of petrol** not includes alcohol and biodiesel, only motor gasoline.

**Electricity Consumption** not include energy consumption in energy sector and losses.

**Energy production from thermal** includes oil products, natural gas, industrial gas, coal and biomass.

**Primary Energy Production** includes natural gas rejected and non-utilized.

**Electricity** includes hydro, uranium and wind.

**Exports** include bunkers.

**Balance** includes only natural gas rejected and non-utilized. It is calculated from other data in the table.

**Energy Consumption per capita** = total consumption / population

**Total Consumption** includes sectorial final energy consumption; losses in transformation, distribution and storage; and energy sector final consumption.

### Russia

The mean of computation standard (conventional) fuel: the volumes of natural fuels (oil, coal, gas, oil products etc.) are recalculated for their own corresponding calorific coal equivalent into the volumes of standard fuel.

### India

**Total Primary Energy Production:** Primary Energy does not include thermal electricity.

**Electricity Consumption Per Capita** = (Gross Generation + Net Imports) / Mid Year Population

### China

**Total Primary Energy Production** refers to the total production of primary energy by all energy producing enterprises in the country in a given period of time. It is a comprehensive indicator to show the level, scale, composition and pace of development of energy production of the country. The production of primary energy includes that of coal, crude oil, natural gas, hydro-power and electricity generated by nuclear energy and other means such as wind power and geothermal power. However, it does not include the production of fuels of low calorific value, bio-energy, solar energy and secondary energy converted from primary energy.

Total Primary Energy Production 2013 figure is also available 2380 mtoe.

**Total Consumption of Energy** refers to the total consumption of energy of various kinds by the production sectors and the households in the country in a given period of time. It is a comprehensive indicator to show the scale, composition and pace of increase of energy consumption. Total energy consumption includes that of coal, crude oil and their products, natural gas and electricity. However, it does not include the consumption of fuel of low calorific value, bio-energy and solar energy. Total energy consumption can be divided into three parts: end-use energy consumption; loss during the process of energy conversion; and energy loss.

Total Consumption of Energy 2013 figure is also available 2625 mtoe.

**Footnotes****Brazil**

- (1) Harvested area.
- (2) Provisional data.
- (6) Major cereals (corn, rice and wheat).
- (9) Major meat (beef, chicken and pork).
- (15) Fishery data refers only to the marine and continental extractive fisheries.

**Russia**

- (3) The data are produced and disseminated by the Federal Service of State Registration, Cadastre and Cartography. At the end of the year.
- (10) Production of livestock and poultry for slaughter.
- (11) Provisional data.

**India**

- (4) The period of agricultural year is from July (of the year indicated in the table) to June (next year).
- (7) As per Second Advance Estimates.
- (12) The data pertains to Financial Year i.e. April (of the year indicated in the table) to March (next year).
- (13) Meat production from commercial poultry farm is included from 2007-08.

**China**

- (5) Data of area of cultivated land of China between 2000 to 2007 is calculated according to the "Communique of Main Data on Land Use Survey" from the First National Agricultural Census of China in 1996. Data of 2008 is from the "Survey of change of land". Data of 2009 is from the "Communique of Main Data from the Second National Land Survey" (Released on 30 December 2013 by the Leading Group Office of the Second National Land Survey of the State Council).
- (14) Preliminary data.

**South Africa**

- (8) Major cereals (maize/corn, wheat, malting barley, sorghum).
- (14) Major meat (beef and veal, mutton, goats, poultry)

**Footnotes**

(1) Provisional data.

(2) Fruits Production considers the following fruits: orange, banana, grape, pineapple, papaya, watermelon, apple, coconuts, passion fruit, mango, tangerine, lemon, melon, guava, peach, persimmon, avocado, cashew nuts, fig, pear, nut, quince.

(3) 1 kg corresponds to 1,03 litre.

(1) Preceding year = 100

(2) Provisional data.

(3) Total Sown Area.

(4) Fruits (excluding nuts), berries and grapes.

(5) Before 2012 yield is given per 1 hectare of plants in fruit-bearing age; for 2012 – 2013 – per 1 ha harvested area.

(6) Livestock and poultry for slaughter.

(7) Availability of tractors in agricultural organizations(excluding tractors with mounted digging, ameliorative and other machines), since 2008 excluding micro enterprises.

(8) Availability of harvesters and beet harvesting machines (excluding plant top gathering machines), since 2008 excluding micro enterprises.

(9) Mineral fertilizers used per 1 ha of crops in agricultural organisations, since 2008-excluding data on micro enterprises.

**Footnotes**

- (1) Information for 2013 is as per second advance estimate.
- (2) Preceding year = 100.
- (3) The period of agricultural year is from July (of the year indicated in the table) to June (next year).
- (4) Data in livestock products pertains to Financial Year i.e. April (of the year indicated in the table) to March (next year).
- (5) Meat production from commercial poultry farm is included from 2007-08 onwards.
- (6) Milk Includes cow, buffalo and goat milk.
- (7) Poultry eggs include eggs from fowls & ducks.
- (8) Number of livestock is produced from Livestock Census which is conducted at a gap of five years. Information from Last two census (2003 & 2007, Reference Date 15th October) has been included.

**Footnotes**

(1) Data of indices of agricultural gross output prior to 2003 are calculated at 1990 prices. The new classification for national standard of industry classification has been implemented since 2003 and the gross output value includes the services in support of agriculture, forestry, animal husbandry and fishery.

(2) Preceding year = 100.

(3) Ownership of Tractors and Harvester-Threshers in Agriculture at Year-End includes large, medium and small-sized tractors, harvesters and threshers are not included.

## Explanatory Notes

### General

**Cultivated Area:** This Consists of net area sown and current fallows.

**Average Yield of Crops:** Average yields per hectare of principal crops have been obtained by dividing the total production by the corresponding total area under each crop.

### Brasil

**Fruits Production** considers the following fruits: orange, banana, grape, pineapple, papaya, watermelon, apple, coconuts, passion fruit, mango, tangerine, lemon, melon, guava, peach, persimmon, avocado, cashew nuts, fig, pear, nut, quince."

Cultivated area includes only harvested area.

### Russia

Agricultural production is the sum of crop-growing and animal husbandry outputs of all agricultural producers including enterprises of private sector (household enterprises, peasant (farm) enterprises and individual employers) in value terms at actual current prices. To calculate agricultural production index the indicator of production volume at comparable prices of previous year is used.

### India

Ministry of Agriculture is the nodal agency for collection, compilation & dissemination of agriculture statistics in India.

Directorate of Economics & Statistics in Department of Agriculture & Cooperation, Ministry of Agriculture is the agency primarily involved with Crop statistics and the reporting period for the same is agricultural year i.e. July to June next year whereas Department of Animal Husbandry, Dairying & Fisheries, Ministry of Agriculture produces & disseminates information on livestock with Financial Year as the reporting period (i.e. April- March next year)

Cultivated Area consists of Net Area sown and current fallows.

### China

**Indices of agricultural gross output:** The development rates of agricultural gross output value deflated by using producers prices indices.

The background is a vibrant green with several overlapping, semi-transparent circles of varying shades. A solid horizontal line runs across the middle of the image. The word "Transport" is centered in white, bold, sans-serif font.

**Footnotes**

1. Information on Railways, Civil Aviation & production of vehicles pertains to Financial Year i.e. April (Year Indicated in the table) to March (Next Year) whereas that for registered vehicles /ownership is as on 31<sup>st</sup> March and that on accidents, injuries and deaths pertains to calendar year.

(1) It includes passenger vehicles (PVs), commercial vehicles (CVs), three wheelers, two wheelers.

(2) Includes Cars, Jeeps, Taxis, Buses and Omnibuses.

(3) Figures indicate number of cars registered in India as on 31<sup>st</sup> March of the year indicated in the table except for 2000 where the data is as on 31<sup>st</sup> March 2001.

**Footnotes**

(1) Since 2013, the statistical coverage of pipeline transport has included China National Offshore Oil Corporation on the basis of China National Petroleum Corporation and China Petroleum & Chemical Corporation.

(2) The indicator "Length of Domestic Civil Aviation Routes" has been changed to "Length of Domestic Regular Civil Aviation Routes" from the year of 2011 but the coverage of the statistics remains stable.

(3) The indicator "Number of Civil Airports" has been changed to "Number of Regular Civil Aviation Airports" from the year of 2011, but the coverage of the statistics remains unchanged.

(4) The ownership of automobiles excludes three-wheel vehicles and low-speed trucks.

(5) The number of passenger cars includes the number of small passenger vehicles and minicars.

(6) Preliminary data.

Table 11.2.5 - Selected Data on Transport - South Africa - 2003/2010

	2003	2005	2006	2007	2008	2009	2010
<b>Traffic</b>

- b) Passenger Rail Agency of South Africa.
- c) Transnet.

**Footnotes**

- (1) Passenger Rail Agency of South Africa.
- (2) These figures cover Metro rail only.
- (3) Transit Pipelines.
- (4) The Land Transport Survey is a monthly survey which covers passenger and freight transportation by rail and road in South Africa. This survey is based on a sample drawn from the 2010 Business Sampling Frame (BSF) that contains businesses registered for value-added tax. This survey has replaced the Land Freight Survey which was discontinued in 2003, and was re-engineered from 2008.

**Explanatory Notes****Russia**

**Public Roads** refer to the federal roads of federal property; regional and inter municipal roads of the property of constituent entities of the Russian Federation; local roads of the property municipalities as well as of property of settlements, municipal and city districts.

**India**

**Length of Railways in Operation:** This indicates total route Kilometers, both electrified and non electrified.

**Length of highways** excludes urban and project roads.

**Length of Petroleum Pipelines** includes both onshore & offshore infrastructure.

**Civil Aviation:** information on air traffic and air operations includes operations of Indian Carriers on scheduled both domestic and international services.

**China**

**Length of Railways in Operation** refers to the total length of the trunk line for passenger and freight transportation ( including both full operation and temporary operation).

**Length of Highways** refers to the length of highways which are built in conformity with the grades specified by the highway engineering standard [Highways WTBZ-Technical Standard JTJ01-88] formulated by the Ministry of Transport, and have been formally checked and accepted by the departments of highways and put into use.

**Length of Petroleum Pipelines** refers to the actual transport distance of oil (or gas) products, which is in general calculated according to the length of single pipeline.

**Freight Traffic (passenger traffic)** refers to the sum of the product of the volume of transported cargo (passengers) multiplied by the transport distance in a given period of time.

**Freight Traffic of Petroleum Pipelines** refers to the total amount of oil (or gas) transported through petroleum pipelines.

**Length of Domestic Regular Civil Aviation Routes** refers to the total length of all domestic periodic civil aviation routes during statistical period.

**Number of Regular Civil Airports** Opened refers to the total number of areas assigned for civil aviation flights to do take-off, landing, taxiing, parking and other actions.

**Ownership of Automobiles** refers to the total number of vehicles that are registered and received vehicles license tags according to the Work Standard for Motor Vehicles Registration formulated by the Transport Management Office under the Department of Public Security at the end of the reference period.

## Footnotes

### Russia

- (6) Number of user's devices of mobile radiotelephone (cellular) communication.  
 (13) Newspapers issued 3 and more times per week (number of titles).

### India

- (1) Data is as on 31<sup>st</sup> December of the year indicated in the table (except for 2000 where it is Financial Year end i.e. 31<sup>st</sup> March 2001). Information for main telephone line pertains to wireline whereas that for cellular mobile telephone pertains to wireless subscription in case of India.  
 (2) Mid Year population estimates have been used for arriving at figures per 1000 inhabitants.  
 (11) Information for 2000-2012 is as per ITU database whereas data for 2013 is as provided by Telecom Regulatory Authority of India and is as on 30<sup>th</sup> September 2013.  
 (14) Data relates to 31<sup>st</sup> March of the year indicated in the table except for 2000 where the same is as on 31<sup>st</sup> December 2000.

### China

- (3) PHS subscribers are also included in those of the main telephone lines.  
 (4) Preliminary data.  
 (8) In the fourth quarter of 2012, National Bureau of Statistics of the People's Republic of China conducted the integrated survey of urban and rural households, unifying the names, classification and statistical standards of urban and rural households. On its basis, we got the ownership data of resident in China, including the number of colour TV sets, cars and personal computers etc.  
 (15) Kinds of newspapers.

### South Africa

#### Household based question

- (5) Does the household have access to a telephone line in the dwelling or household?  
 (7) Does the household have access to a cell phone in the dwelling or household?  
 (9) Does the household have access to a computer in the dwelling or household? Question was only asked once, in 2005.  
 (10) Does the household have access to an internet connection in the dwelling or household? Question was asked in 2005, and then again in  
 (12) Not access to outside sources, just whether they have access in the household.

## Explanatory Notes

### Brasil

**Number of Internet Users per 1000 Inhabitants** - It was considered the inhabitants 10 years old or over. Internet users - persons 10 years old or over who accessed the Internet somewhere (own home, workplace, center of free or paid access, home of other persons or any other place) by PC desktop or laptop (notebook, palmtop, pocket pc or handheld) at least once in the reference period of the last three months.

### Russia

**Main Telephone Lines** are telephone sets having independent numbers at the public telephone station as well as telephones with a shared line intended or public use. They switched on the public network and render service of local, inetrcities and international communication.

**Cellular communication** - mobile radio and telephone communication. Mobile communication - complex of technical means (radio and communication equipment, communication lines and structures), which render communication facilities for mobile subscribers and subscribers of public telephone network.

### India

**Main telephone Line** - Information relates to wireline connections i.e. connections with (fixed) telephone line connecting the subscriber's terminal equipment to the network. It includes WLL (fixed line extending upto the base unit).

**Subscribers of Cellular Mobile Telephone** - Includes wireless connections.

**Data on Internet User** - Includes information on subscription through both fixed lines as well as wireless (mobile phones ) internet subscriptions.

**Number of Daily Newspaper** - includes newspapers in all languages & bilingual/multilingual newspapers.

### China

**Main Telephone Line** refers to a main line which is a (fixed) telephone line connecting the subscriber's terminal equipment to thepublic switched network and which has a dedicated port in the telephone exchange equipment. The number of ISDN channels are included. PHS subscribers are included.

**Subscribers of Cellular Mobile Telephone** refer to number of portable telephone users subscribing to a public mobile telephone service and have access to Public Switched Telephone Network (PSTN) using cellular technology. This includes analogue and digital cellular systems.

**Internet Users** refer to the inhabitants aged 6 or above and have connected with Internet at least once in the last 6 months.

**Number of Daily Newspapers** includes all kinds of newspapers, with CSSN (China Standard Serial Number).

### South Africa

Household based question.

Does the household have access to a telephone line in the dwelling or household?

Does the household have access to a cell phone in the dwelling or household?

Does the household have access to a computer in the dwelling or household? Question was only asked once, in 2005.

Does the household have access to an internet connection in the dwelling or household? Question was asked in 2005, and then again in 2009, 2010.

Not access to outside sources, just whether they have access in the household.

**Footnotes****Brazil**

- (1) The general government includes federal government, state governments, and local governments, and excludes Central Bank of Brazil and public enterprises.
- (2) Nominal result.
- (7) Total tax revenue corresponds to the fiscal load.
- (8) The Annual average exchange rates used is available in Tables 13.2.1 and 14.1.

**Russia**

- (3) The calculation carried out on the basis of data of the Federal Treasury, 2013 - according to preliminary data.
- (9) The calculation according to the data of Bank of Russia. 2013 - preliminary data.

**India**

(4) For all Information reference year is Financial Year (i.e. April of the year indicated in the table to March next year).

(5) The data relates to General Government i.e. Central Government & State Government combined. GDP is at current market price. Income tax is collected by Central Government only. Information since 2011 is provisional.

(10) Includes Currency with public, deposit money of the public and post office saving bank deposit. Average annual exchange rate for the financial year has been used for currency conversion.

**China**

(11) M2 is calculated using the year-end exchange rates released by State Administration of Foreign Exchange.

**South Africa**

(6) Fiscal year: year begins on 01 April to 31 March of the following year.

M2 comprises:

\* notes and coins in circulation outside monetary sector.

\* cheque and transmission deposits.

\* other demand, short & medium term deposits up to 6 months.

South African Reserve Bank.

**Footnotes**

Government finance in fiscal years; year begins on 01 April to 31 March of the following year.

(1) No definition available for some of the tax categories. Therefore this value is the residual of all other taxes. Total tax revenue minus the detail of all available categories. This also includes the adjustments made for South African Customs Union transfers.

(2) M3 is the broadly defined money supply aggregate officially used in South Africa.

(3) The prime overdraft rate serves as a market reference or benchmark rate for interest rates, but does not determine interest rates.

## Explanatory Notes

### Brasil

**Share of Deficit(-)/Surplus of General Government to GDP** - The general government includes federal government, state governments, and local governments, and excludes Central Bank of Brazil (Bacen). and public enterprises. Nominal result.

**Share of Income Tax to Revenue** - Total tax revenue corresponds to the fiscal load.

**M2 Supply (End of the Year)** - The Annual average exchange rates used is available in Tables 13.2.1 and 14.1.

**Expenditure** - Data covers Federal Government only.

**Other expenditure** is the single largest item because it comprises transactions such as transfers to states and municipalities and debt management expenditure.

### Russia

**Budget Revenues** monetary funds coming to the budget, excluding funds which in accordance to the Budget Code of the Russian Federation are the sources of financing the budget deficit.

**Budget Expenditures** monetary funds paid from the budget funds, excluding funds which in accordance to the Budget Code of the Russian Federation are the sources financing the budget deficit.

**Deposit Rate** average rate on deposits of individuals in credit institutions (including OAO Sberbank of Russia) for up to 1 year.

**Lending Rate** average rate on loans to corporate customers in credit institutions (including Sberbank of Russia) up to 1 year.

**Annual rates** are calculated as the average of monthly data.

### India

General Government includes both Central Government and State Government.

**Income Tax:** Income Tax Act, 1961 imposes tax on the income of the individuals or Hindu undivided families or firms or co- operative societies (other than companies) and trust (identified as bodies of individuals associated of persons) or every artificial juridical person. The inclusion of a particular income in the total incomes of a person for income-tax in India is based on his residential status. There are three residential status, viz., (i) Resident & Ordinarily Residents (Resident) (ii) Resident but not Ordinary Resident and (iii) Non Residents. There are several steps involved in determining the residential status of a person. All residents are taxable for all their income, including income outside India. Non residents are taxable only for the income.

M1 = Currency with the Public + Deposit money of the Public

M2 = M1 + Post Office savings banks deposits.

M3 = M1 + Time deposits with banks.

M4 = M3 + Total Post Office Deposits.

### China

**Revenue of Consolidated Budget** refers to income for the government finance through participating in the distribution of social products. It is the financial guarantee to ensure government functioning. The contents of government revenue have been changed several times.

**Expenditure of Consolidated Budget** refers to the distribution and use of the funds which the government finance has raised, so as to meet the needs of economic construction and various causes.

**Share of Deficit/Surplus of General Government to GDP** = (Revenue of consolidated budget- Expenditure of consolidated budget)/GDP.

**The Contents of Government Revenue** include the following main items:

**a) Various Tax Revenues** including domestic value added tax (VAT), domestic consumption tax, VAT and consumption tax from imports, VAT and consumption tax rebate for exports, business tax, corporate income tax, individual income tax, resource tax, city maintenance and construct tax, house property tax, stamp tax, urban land use tax, land appreciation tax, tax on vehicles and boat operation, ship tonnage tax, vehicle purchase tax, tariffs, farm land occupation tax, deed tax, and tobacco leaf tax, etc.

**b) Non-Tax Revenue** including special program receipts, charge of administrative and institutional units, penalty receipts and others non-tax receipts.

**The Contents of Government Expenditure** include the following main items:

a) Expenditure for general public services; b) Expenditure for foreign affairs; c) Expenditure for national defence; d) Expenditure for public security; e) Expenditure for education; f) Expenditure for science and technology; g) Expenditure for culture, sports and media; h) Expenditure for social safety net and employment effort; i) Expenditure for medical and health care; j) Expenditure for environment protection; k) Expenditure for urban and rural community affairs; l) Expenditure for agriculture, forestry and water conservancy; m) Expenditure for transportation; n) Expenditure for industry, commerce and banking, etc.

### South Africa

M0 = Deposits of monetary institutions with the central bank and banknotes and coin in circulation outside the central bank.

M1 = Notes and coin in circulation plus cheque and transmission deposits and other demand deposits of domestic private sector with monetary institutions.

M2 = M1 plus other short-term deposits held by the domestic private sector.

M3 = M2 plus long-term deposits held by the domestic private sector.

## Explanatory Notes

### Russia

**Export of goods** - removal of goods (commodities) from the Russian Federation territory without of a guarantee of the return them back. Export includes the removal of domestically produced goods and reexport of goods as well. Domestically produced goods include also foreign manufactured goods imported into the country and significantly reprocessed and as a result changed their qualitative and technical characteristics. Re-exports - goods imported to the territory of the Russian Federation and then removed from its territory without payment of customs dues, taxes and application of embargo of economic restrictions. Recording of the good exports is realised by FOB prices or border prices of the exporting country.

**Import of goods** - importing of goods into the Russian Federation territory without a guarantee of the return them removed back. Imports include the brought goods for consumption in the economy and good imported into the country territory in according to the reimport system. Re-imported goods are those moved out from the Russian Federation territory and then moved in this territory without payment of custom dues, taxes and application of embargo or economic restrictions. Recording of the good import is realised by in franco-border prices of the importing country (CIF), i.e. prices of goods include expenditures on the insurance and transportation to the border of the importing country.

**Balance of payments** data are presented in accordance with the 6th version of the IMF's Balance of Payments and International Investment Position Manual. In the table 14.2.2 data on import and export of Russia are presented about the major trade partners and BRICS countries.

### India

**Exports** are credited to the country of final destination as declared by explorers in the shipping bill whether that country possesses a sea-port or not. The country of final destination is defined as that to which goods exported from India are intended to pass whether by sea and land or by sea only or by air without interruption of transit, save in the course of transshipment or transfer from one means of conveyance to another.

**Imports** are classified with reference to the countries whence they were consigned to India and not with reference to the countries whence they were shipped directly to India. The country of consignment is defined as that from which the goods have come whether by land or sea or by sea only or by air, without interruption of transit save in the course of transshipment or transfer from one means of conveyance to another. Thus the countries where goods are consigned are not in all cases the countries of actual origin of goods produces in one country maybe purchased by a firm in another country and then dispatched after an interval to India.

**The data for Imports, Exports and Re-exports** given are according to the Indian Trade Classification (based on harmonized Commodity description and coding system).

**External Debt to GDP** includes Long term debts as Multilateral loans, bilateral loans, International Monetary Funds Trade Credit, External Commercial borrowings; non-Resident Indian deposits, Rupees debts and Short term deposit.

Under current account of the BoP, transactions are classified into merchandise (export and imports) and invisibles. Invisible transactions are further classified into three categories, namely a) Service- travel, transportation, insurance, Government not included elsewhere (GNIE) and miscellaneous (such as, communication, construction, financial, software, news agency, royalties, management and business services); b) Income; and c) Transfers (grants, gifts, remittances, etc.) which do not have any quid pro quo. Under the Capital Account, capital inflows can be classified by instrument (debt or equity) and maturity (short or long term). The main components of the capital account include foreign investment, loans and banking capital. Foreign investment, comprising Foreign Direct Investment consisting of Foreign Institutional Investors (FIIs) investment, American Depository Receipts? Global Depository receipts (ADRs/GDRs) represents non-debt liabilities, while loans external assistance, (external commercial borrowings and trade credit) and banking capital, including non-resident India (NRI) deposits are liabilities.

### China

**Foreign Trade statistics and Coverage** China's official external trade statistics is implemented by General Administration of Customs of the Peoples Republic of China. It's compiled from the declarations, which are made to the Customs by imports, exports or their agents and subject to verification by customs officers at the time of customs clearance. External Statistics comprise all merchandise passing through China's Customs territory (with the exceptions mentioned below). Including: goods from abroad entering customs warehouses, bonded areas or special economic zones (SEZ) and goods leaving abovementioned areas to abroad; goods for inward or outward processing or assembling and subsequent re-exportation or re-importation; goods on lease for one year or more; goods imported or exported by foreign-invested enterprises; international aid or donations, etc. Excluding: Customs statistics do not cover temporary imports or exports; goods on lease for less than one year; travellers' personal effects; ship's and aircraft' bunkers and stores obtained abroad; monetary gold and coins being legal tender; goods in transit through China.

**Import and Export Valuation** Imports are valued on a CIF basis, which is based on the transaction value and all freight, insurance and other charges incurred before discharging the goods at the first port of entry of China. Exports are valued on a FOB basis, which is based on the transaction value at China's port of shipment equivalent of the actual price at which the goods are sold. The statistical value is expressed in RMB and USD respectively. Any transaction value in terms of a currency other than RMB or USD shall be converted into RMB or USD at the exchange rate between issued by the State Administration of Foreign Exchange.

**Trading Partner** The country of origin is recorded for imports while the country of final destination for exports. The country of origin refers to the country or region where the imported goods have been grown, mined or manufactured. If two or more countries (regions) were involved in the manufacture of the products, the place where the last substantial working or processing was carried out will be recorded as the country (region) of origin. However, the countries (regions) of origin of the imported goods are not quite clear will be recorded as "country unknown". The country of final destination refers to the country or region where the exported goods are to be consumed, utilized or further processed or manufactured. In instance where the country of final destination can not be ascertained, the exports will be credited to the final country (region) dispatched to as known at the time of exportation.

**Inflows of FDI** refer to the investments inside China by foreign enterprises and economic organizations or individuals (including overseas Chinese, compatriots from Hong Kong, Macao and Taiwan, and Chinese enterprises registered abroad), following the relevant policies and laws of China, for the establishment of ventures exclusively with foreign own investment, Sino-foreign joint ventures and cooperative enterprises or for co-operative exploration of resources with enterprises or economic organizations in China.

It includes the re-investment of the foreign entrepreneurs with the profits gained from the investment and the funds that enterprises borrow from abroad in the total investment of projects which are approved by the relevant department of government.

**Outflows of FDI** refer to investment made by domestic enterprises and organizations (referred to as domestic investors) in foreign countries and Hong Kong, Macao and Taiwan regions in the form of cash, in-kind, intangible assets and other ways, and the economic activities centering on controlling the operation and management of those foreign enterprises.

**The Balance of Payments (BOP)** is a statement that summarizes economic transactions between residents and nonresidents during a specific time period.

**The International Investment Position (IIP)** shows at a point in time the value of : financial assets of residents of an economy that are claims on nonresident or are gold bullion held as reserve assets; and the liabilities of residents of an economy to nonresidents.

The image features a vibrant, abstract background composed of several overlapping, semi-transparent circles in various shades of golden-yellow and mustard. The circles are arranged in a way that creates a sense of depth and movement. In the center of the composition, the word "Tourism" is written in a clean, white, sans-serif font. The overall aesthetic is modern and energetic, with a warm color palette.

Statistics South Africa.

**Footnote**

(1) Includes Australia, New Zealand, the island of New Guinea, and neighboring islands in the Pacific Ocean.

**Explanatory Notes****General**

Tourism, Rome 1963.

**International Visit or:** An international visitor is any person visiting the country on a foreign passport and the main purpose of visit is other than the exercise of an activity remunerated from within the country of establishments of residence in the country. This definition covers two segments of visitors: Tourists' and "Same Day Visitors".

A "foreign tourist" is a person visiting India on a foreign passport, staying at least twenty four hours in the country, the purpose of whose journey can be classified under one of the following headings:

- (i) Leisure (recreation, holiday, health, study, religion, and sport);
- (ii) Business, family, mission, meeting.

**Brazil**

**Foreigner Tourist Arrival** – Arrivals of non-residents persons across international borders of Brazil classified as a tourist (or overnight visitors), and with a stay for less than a year for any main purpose: 1- Personal (Holidays, leisure and recreation, Visiting friends and relatives, education and training, health and medical care, religion and pilgrimages, shopping and others) and Business and professional.

They are not counted as visitors/tourist: employed by a resident entity, border workers, seasonal workers, other short and long term workers, nomads and refugees, transit passengers not entering the economic and legal territory, crews on a public modes of transport, persons entering the country to establish there their country of residence, long-term students and patients and their family, diplomats, consular staff, military personnel and their dependants, armed forces on maneuver.

**Russia**

**Foreign tourist arrival** refer to foreign visitor arrivals who come to Russia for medical treatment, recreation, sight-seeing, sport, business, religion and other purposes excluding the exercise of an activity remunerated from within the country, and who stay from 24 hours till 6 months or at least 1 night in the country.

**India**

A "foreign tourist" is a person visiting India on a foreign passport, staying at least twenty four hours in the country, the purpose of whose journey can be classified under one of the following headings:

- (i) Leisure (recreation, holiday, health, study, religion & sport)
- (ii) Business, family, mission, meeting.

**China**

**Foreign Tourists Arrivals** refer to foreign visitor arrivals who come to China (mainland) for sight-seeing, vacation, visiting relatives, medical treatments, shopping, attending conferences or to engage in activities of economic, cultural, sports and religious. In compiling statistics, each time of entering China (mainland) is counted as one person-time.

## A Brief Overview of The Statistical System of Brazil

### I. Organizational Structure of the IBGE

The Brazilian Institute of Geography and Statistics (IBGE) is ruled according to the Law n.º5.878, of May 11th 1973, and the Statute – Decree n.º3.740, of June 13th, 2003. It is linked to the Ministry of Planning, Budget and Management, with the role of coordinating the Brazilian Statistical System and being the main producer of official statistics in Brazil.

The Brazilian official statistics are being produced by IBGE, Central Bank, ministries and statistical state agencies. IBGE is the official statistics office responsible for the production, analysis and dissemination of Statistical information (demographic, economic and social), as well as geographical, cartographic and geodetic information and those related to natural resources and environment.

IBGE besides its functions in the Statistical System is also the main producer of geo scientific information and has the role of coordinating the National Cartographic System. One of the main projects of the production of geo scientific information is the construction of the National Spatial Data Infrastructure – INDE. The purpose of the INDE is to catalogue, to integrate and harmonize geospatial data from Brazilian institutions, producers and sponsors of this kind of data, so that these data can be easily located, accessed and used for several uses and for any user who has Internet access.

IBGE is responsible for the construction, provision and operation of the Brazilian Geospatial Data Site-SIG Brazil, as well as for the management of the Brazilian Directorate of Geospatial Data - DBDG. It is also responsible to prepare the proposal for obtaining the necessary resources for the implementation and maintenance of INDE.

The programs carried out by IBGE are fundamental for both the government and the society. Several public policy actions are based on the information produced by IBGE on the Brazilian reality.

In order to produce statistical and geo scientific information, IBGE is present countrywide, with units at headquarters, in Rio de Janeiro, and in state and municipal levels, with the following composition: Collegiate bodies of senior direction: Technical Council, Board of Trustees, Board of Directors; Channels of direct and immediate assistance to the President: Cabinet, Attorney General; Sectional bodies: Internal Audit, Executive Board; Specific individual organs. Directorate of Surveys, Directorate of Geosciences, Directorate of Informatics, Centre for Documentation and Information Dissemination, National School of Statistical Sciences, 27 State Units (26 state and Federal District), with 581 agencies to collect and disseminate data.

The production of statistics and geo scientific information is carried out by the Directorate of Geoscience and Directorate of Surveys.

These departments are supported by the Directorate of Informatics, which ensures the infrastructure of computer hardware and software and data communication. The Centre for Documentation and Information Dissemination is in charge of the dissemination policy for the results of all surveys carried out by the institution, publicizing them online, including micro data, free of charge.

The Executive Board is accountable for planning, budget and overall coordination of IBGE's work.

The Directorate of Surveys is responsible for the production of social, economic and demographic statistics as well as for the production of synthesis to the System of National Accounts and Social indicators. It is also responsible for coordinating National Statistical System, systematically calling meetings with users and other producers of statistical information.

The Directorate of Geosciences is responsible for the production of geographical, geodetic and cartographic information, as well as those related to environmental and natural resources. It also coordinates the fundamentals Geodetic and Basic Cartography plans.

IBGE maintains the National School of Statistical Sciences, which offers the following courses: Bachelor of Science degree in Statistics, Post Graduate Diploma in Environmental Analysis and Land Management, Masters in Population Studies and Social Research and training programs for IBGE technicians.

The units of IBGE at headquarters are responsible for the design of surveys, analysis of results and coordination of the teams working at the national level.

The units of IBGE located throughout the national territory are responsible for the collection, review and submission of primary statistical data to headquarters.

These units also conduct field activities related to geodesy and cartography.

## **II. Work Program for the Production of Statistics**

In 2012, IBGE has updated its Strategic Plan in order to set goals and targets for the future years. Thus, the Strategic Plan is the main instrument of governance of the institution.

The program of work and its schedule are discussed by all technical and infrastructure areas before being consolidated into IBGE'S Strategic Plan. This is submitted to the Planning Board, composed by IBGE's President and directors, which evaluates and approves it.

IBGE's Strategic Plan subsidizes the preparation of the Federal Government Multi-year Plan (PPA, in Portuguese) for the same period. The PPA covers all areas of government and describes the main objectives and goals for various organizations and ministries.

The institutional goals to be met in a semester have been set at the beginning of each semester. Institutional goals encompass the full range of publications planned for the period. These goals are approved by the Board and broadly disseminated, both internally and on the internet. They are an item in the objective evaluation of the institution's performance in accomplishing its mission.

IBGE's work program is presented to various Advisory Committees, which are composed of renowned members in the area, who discuss methodological issues and assist in setting priorities.

The Advisory Committees cover the following areas: Population Census, Agriculture Census; National Index of Consumer Prices; Mortality Statistics; Planning Control and Evaluation of Agricultural Statistics; Brazilian Regional Accounts.

As the demands for information not included in the predetermined work program cannot be satisfied with the resources available, they are met through agreements with the concerned governmental entities, which fund additional surveys. Examples of additional surveys are those demanded by the Ministries of Health, Education and Social Development.

IBGE also cooperates with various ministries, such as the Ministry of Finance, and the central Bank for the preparation of National Accounts.

Annually, the Ministry of Labor provides IBGE with the Annual list of Social Information (RAIS), which consist of the set of administrative records used to update the Central Business Register (CEMPRE). This register is used to select the sample of enterprises for the Annual Economic Surveys, which has replaced the Economic Censuses since 1990's. To set their long term lines of work, IBGE hold regular meetings with producers and users of social, economic and territorial information. These meetings aim at preparing the revision and expansion of the General Plan of Statistical and Geographical Information, based on mobilization and consultation to producers and users of information, including governmental institutions, survey institutes, NGOs, Scientific associations, as well as technicians and researchers interested in the production, dissemination and use of information.

This action resulted in the preparation of a diagnosis of the state of the art of production of information in the sphere of public services and the mapping of gaps, identifying opportunities for improvement and demands for new information.

The growing demand for socioeconomic and demographic information, as well as the inclusion of new issues, requires research in shorter time intervals.

One solution to fit the statistical offices to this new reality has been the adoption of models that address a systematic conception, with the production of integrated information sources and databases.

The Integrated System of Household Survey (SIPD) will integrate the existing household surveys (National Household Sample Survey - PNAD, Monthly Employment Survey - PME, Household Budget Survey - POF, Urban Informal Economy Survey - ECINF) and meet new demands.

Being a new project, with proposals of significant dimension, planning SIPD requires intensive contact with users and producers of information. In this sense, the steps in the development of SIPD have been presented in seminars and conferences sponsored by IBGE.

The transparency of this process assures users the joint monitoring and evaluation of the paths taken in building this new project.

### III. Social Statistics Committee

The Social Statistics Committee, which was established by Inter ministerial Decree n°424, issued on December 6, 2007, is a forum for the discussion and evaluation of the demands of the Social Statistical System of the Country.

The following Ministries and Institutes are part of the Social Statistics Committee: Ministry of Social Development and the 'Fight against Hunger' Food Programme; Ministry of Education; Ministry of Planning, Budget and Management; Ministry of Social Welfare; Ministry of Health; Ministry of Labor and Employment; Institute of Applied Economic Research - IPEA; Ministry of Justice; National Institute of Educational Studies and Research Anísio Teixeira - INEP; and Brazilian Institute of Geography and Statistics - IBGE.

The Social Statistics Committee is composed of the Managerial Committee, which is responsible for setting guidelines for the work of the committee, and the Executive Group, responsible for implementing such guidelines.

The work of the Social Statistics Committee has been following the guidelines below since 2009: Draw up the inventory of social statistics, especially the official ones, updating them regularly; Ensure and improve the comparability and accessibility of information; Encourage the adoption of concepts, classifications and methods for processing, storing and presenting official statistical information; Fill in information gaps and expand the integration of data sources; Organize the demand for information and coordinate their production and use; Regulate and facilitate access by various government agencies to existing databases, ensuring transparency, visibility and secrecy; Undertake actions in order to allow visibility to the work developed by the Committee; and Adopt the Fundamentals Principles of Official Statistics.

The Executive Group has carried out intensive work, such as the identification of data bases of several agencies, the preparation for standardized procedures for the project Metadata Bank at IBGE.

One of the main goals of the committee is to integrate the various database of social information derived from surveys and administrative records, in order to promote the effective coordination and governance of the national statistical system.

### IV. Municipal Commissions on Geography and Statistics

IBGE invests in strengthening the principle of transparency, allowing society to know and follow the development of its activities.

In this context, IBGE has expanded the operation area of the old Municipal Census Committees, which used to be created to function only when censuses were being carried out.

Municipal Commissions on Geography and Statistics (CMGE's, in Portuguese) have been created, from 2010 Brazilian Census, in order to broaden participation of local communities in the processes and dissemination of the studies, surveys and general maps developed by the institution.

The CMGEs include the participation of representatives from IBGE, as well as executive, legislative and judicial representatives of municipalities and representatives of other local civic organizations.

### V. Technical Cooperation

The following nationwide technical cooperation may be highlighted: Ministry of Health; Ministry of Education; Ministry of Cities; Ministry of Agrarian Development; Ministry of Aquaculture and Fishing; Special Secretariat of Policies for Women at the Presidency of the Republic; Ministry of Social Development and the "Fight Against Hunger" Food Program; Special Secretariat for Human Rights at the Presidency of the Republic; Ministry of Culture; National Justice Council (CNJ).

With regard to international technical cooperation agreements, the following work may be highlighted: Specialized Meeting on Statistics of MERCOSUR – the Cooperation Project in Statistics towards the integration MERCOSUR and the strengthening of its national and regional institutions through the development, improvement, harmonization and integration of the production and dissemination of statistics.

In the period of 2010-2013, IBGE has been conducting international technical cooperation agreement on technology and methodology on population and agricultural censuses; social, demographic and economic statistics with many countries.

## **VI. Interaction with the International Community**

IBGE has extended its participation in the international Statistical community with United Nations Statistics Division - UNSD, the Statistical Conference of the Americas - SCA, the Conference of European Statistics - CES, the Organization for Economic Cooperation and Development - OECD, the World Tourism Organization - WTO, the International Labour Organization - ILO, the Community of Portuguese Speaking Countries - CPLP, BRICS, among others.

## **VII. Courses and Conferences for the Press and General Users**

In recent years, IBGE has expanded the role of communication and the relationship with the press, as an alternative way of publicizing its work and building its image and credibility before the public.

In press conferences, the release is available for participants at the beginning of the event. At the same time, indicators and commentary on survey results are published at the IBGE's website.

Besides structural surveys, IBGE monthly publishes about ten short term data. Thus approximately 100 press conferences are held at IBGE a year.

The publication of short term data is regulated by Decree nº355, issued on November 5, 2007, and signed by the Ministry of Planning, Budget and Management. According to the decree, survey results must be sent to government officials at 7 a.m., i.e., two hours in advance of public access to the data, which happens at 9 a.m. As to access to information, IBGE releases, on this website, the list of state official who have the precedence over the public, a fact that ensures the transparency of the procedure.

Qualifying journalist is essential to improve the reports they write on IBGE surveys. In recent years, the Coordination of Social Communication (CCS) has organized several courses for journalists. Courses on more complex information were held (e.g. National account and census) as well as training for the use of digital tools that allow quick access to statistical information.

## **VIII. Access to the Internet and Other Access**

IBGE provides several ways for accessing the information it produces, so that the public is better served: publications (books and periodicals) accompanied by CD-ROMs; free telephone consultation; a Central Library, located at the Centre for Documentation and Information Dissemination in Rio de Janeiro; a connection with the Department of Documentation and Information Dissemination at the IBGE State Units, located in all Brazilian state capitals.

IBGE provides electronic products and services that are the main media through which information such as: specific files with data on population, economy, cartography, geodesy, natural resources and environment in free access in the website (<http://www.ibge.gov.br>).

Besides the electronic publications the IBGE web page has two important databases to stand out: Aggregated Statistical Tables (SIDRA in Portuguese) – Database with information grouped in territorial level that allows the users to construct their own tables according and compare data to selected information; and Statistical Multidimensional Database (BME in Portuguese) – Database with micro data information that allows users to construct tables according to selected information and confidentiality constraints. This one requires Internet subscription.

## Annexure - II

# A Brief Overview of The Statistical System of Russia

Federal State Statistics Service (Rosstat) is the authority responsible for production of the official statistics on social, economic, demographic, ecological and other dimensions of society.

National statistical system in the Russian Federation is based on the principals of centralized structure. The main task of the national statistical system is to provide timely, comprehensive and objective information on the socio-economic development of Russia, its regions and economic sectors to the governmental authorities at all levels, media, scientific community, business entities, population and international organizations. In order to achieve this aim Federal plan of statistical works has been developed. It defines the main directions of statistical monitoring of socio-economic and demographical processes in the country. The Federal plan is worked out by Rosstat in cooperation with other governmental agencies and adopted by the Government of the Russian Federation.

Rosstat main functions are:

- to submit the official statistics in accordance with the established regulations to the President and the Government of the Russian Federation, Federal Assembly of the Russian Federation, other governmental entities, including regional authorities, media, legal entities and individuals, and also to international organizations;
- to develop and approve within its power the official statistical methodology for the federal statistical observation and official statistics production in accordance with the established regulations; to ensure that methodology complies with international standards and the UN Fundamental Principles of Official Statistics;
- to approve federal statistical observation forms and instructions on their completion;
- to coordinate activities in the field of official statistics while developing Federal plan of statistical works, proposals on its updating;
- to maintain, provide methodological support and conduct federal statistical observations and to process collected data;
- to develop and maintain national classifications of technical, economic and social data in accordance with the established regulations;
- to ensure within its power protection of confidential information received as a result of statistical observation;
- to provide users with official statistical and other information in accordance with established regulations;
- to implement internationally adopted statistical practices, gained from the membership of the Russian Federation in international organizations.

### I. Statistical System: Principles of Organization

The national statistical system is a network of interacting governmental entities and bodies that collect, process and disseminate statistics, describing the pace of socio-economic and demographic development of the country.

The system is developed in accordance with the administrative territorial division of the country in order to ensure provision of comprehensive and objective statistics on socio-economic development of the Russian Federation, its regions, industries and economic sectors to the public authorities and all levels of government, the media, scientific community, business entities, public and international organizations.

The system comprises two organizational levels: federal, represented by Rosstat Head Office, and regional level, represented by Rosstat regional offices.

### II. Federal Level of the State Statistics

Federal level of the state statistics involves Rosstat Head Office, Main Computing Centre, Scientific Research Institute for problems of socio-economic statistics, Scientific Research and Design and Technology Institute of Statistical information, Information and Publishing Center "Statistics of Russia".

### III. Regional Level of State Statistics

Russian Federation is divided into 85 constituted entities (regions). In each constituent entity (republic, oblast, autonomous area, territory) Rosstat has its regional office.

Rosstat regional offices collect, process statistics, provide data to the republic, provincial and regional authorities and other users.

#### **IV. Legal Basis of the Official Statistical Activities**

Federal State Statistical Service activities are regulated by the Constitution of the Russian Federation, federal laws, Decrees of the President and the Government of the Russian Federation, international treaties of the Russian Federation.

The basis of the statistical activities in Russia is the federal law "On official statistical accounting and the system of national statistics in the Russian Federation" of 2007 (as amended).

Carrying out of major statistical surveys, such as Population Census and Agricultural Census is supported by the specific federal laws.

In order to provide Rosstat with all necessary data aiming at creating national information resources, the Government of the Russian Federation issued an act on obligatory provision of primary statistical and administrative data.

#### **V. Emerging Challenges**

Timely, accurate, reliable official statistics on social, economic, demographic, ecological and other dimensions of the society is vital for the country's socio-economic development and governance.

Nowadays the Russian statistical system is being developed in the environment of significant socio-economic changes, implementation of the international standards of financial data reporting. This transition defines the demand for new approaches in official statistics as well as creation of a flexible statistical information system, responding to changes occurring in the society.

Development of the statistical system is based on further technological modernization, implementation of new planning and decision-making methods and improvement of human resources.

The principal aspect of Russian statistics modernization is higher transparency of statistical methodology and a broader access to official statistics for all users.

The Federal task program "Development of the state statistics in Russia" has been developed to face the challenges.

The aim of the program is to continue improvement of the state statistical system and modernization of state statistics in Russia on the basis of international standards in methodology and technology of data collection, production and dissemination. The following steps have to be taken to achieve the main objective of the Project: (i) development of methodological guidelines that support practical implementation of modern global standards of data production with regard to Russian economic environment; (ii) development and implementation of modern information technologies of data collection, storage and dissemination; (iii) development of human resources of statistical service based on foreign experience as well as development of e-learning system.

## Annexure - III

# A Brief Overview of The Statistical System of India

India has a federal structure of Government and the Indian Statistical System Functions within the overall administrative set up of the country. The division of responsibility for administration between the Union Government and the State Governments is on the basis of three-fold classification of all subjects, namely, the Union List, the State List, and the Concurrent List. The Concurrent list represents the subjects where both the Union and State Governments can operate, and it includes the subject Statistics. There is a further division of responsibility, by subjects or groups of subjects, among the different Ministries/Departments of the Union Government and among the Departments of State Government, on the basis of their administrative functions.

The Indian Statistical System, therefore, may be treated as both decentralized and centralized system. For example, the large-scale statistical operations conducted all over the country like Population Census, Economics Census, Agricultural Census and Livestock Census, as well as nation-wide sample surveys including the Annual Survey of Industries and the Socio-Economic Surveys are the responsibility of central agencies. Similarly, compilation of national accounts, preparation of all-India Prices and Industrial production indices are also Central activities. In the case of States, the State statistical organizations collect and generate data on a number of variables. The Central Government acts as the coordinating agency for presentation of statistics on an all-India basis even in fields where the States have primary authority and responsibility for collection of statistics. The State Directorates of Economics and Statistics (DEs) carry out the responsibility of coordination of all statistical activities at the State level and keeping liaison with the Ministry of Statistics and Programme Implementation (MOSPI) at the Centre for the purpose of maintaining uniformity and consistency in the data produced and consolidated at different levels.

### I. Statistical System at the Centre

The Ministry of Statistics and Programme Implementation (MOSPI) is the nodal agency for planning and facilitating the integrated development of the Statistical system in the country including laying down norms and standards in the field of official statistics, evolving concepts and definitions, suggesting methodologies of data collection, processing and dissemination of results. The Ministry has two wings viz. National Statistical Organization (NSO), commonly called 'Statistics Wing' and the 'Programme Implementation (PI) Wing'. The NSO consists of the Central Statistics Office (CSO) including Computer Centre and the National Sample Survey Office (NSSO). The Programme Implementation Wing has three divisions viz. Twenty Point Programme Division, Infrastructure Monitoring Division, and Member of Parliament Local Area Development Division. In addition to a number of publications brought out by the MOSPI, both NSO and PI wing generate a lot of statistical information which is used by policy planners, researchers and other users. The MOSPI also has an autonomous Organization viz. the Indian Statistical Institute (ISI) which is a premier statistical institute of international repute.

Besides the NSO, most of the line Ministries/Departments in the Government of India dealing with different subjects such as Agriculture, Water, Health, Rural Development sectors etc. have statistical establishment to perform statistical activities for the respective Ministry/ Department, and they are generally headed by senior level statistical functionaries to facilitate proper coordination with NSO. Most of these Departments bring out respective statistical data/publications.

### II. Central Statistics Office (CSO)

CSO is headed by a Director General with the headquarters located in New Delhi. It consists of five major Divisions viz. National Accounts Division (NAD), Economic Statistics Division (ESD), Social Statistics Division (SSD), Training Division and Coordination and Publication Division (CAP). In addition, CSO has a premier training institute called National Academy of Statistical Administration (NASA) located near Delhi which has been conducting national/international statistical training programmes since its inauguration in February 2009.

The Central Statistical Office is responsible for coordination of statistical activities in the country, and evolving and maintaining statistical standard. Its activities mainly include National Income Accounting; conduct of Economic Census and its follow up surveys, processing of data collected through Annual Survey of Industries and preparation of Reports, compilation of Index of Industrial Production, as well as Consumer price Indices, Gender Statistics, and imparting training on Official Statistics. CSO brings out a number of publications periodically including Statistical Year Book, Monthly

Abstract of Statistics, India in figures, Energy Statistics, Infrastructure Statistics, Environment Statistics etc. besides disseminating statistical data to various national and international agencies. The other activities include preparation of Five Year Plan and Annual Plans in respect of statistical matters, holding conferences with the Central and State statistical agencies, revision of National Industrial Classification, preparation and implementation of Strategic Plans to make available data on key parameters, improving the quality and reliability of existing data sets, making available new data sets on emerging fields to meet increasing data demands, and, reducing time lag in dissemination of data.

The Computer Centre under CSO handles the data processing jobs of the MOSPI, provides training to statistical personnel on software, maintains the MOSPI's website ([www.mospi.gov.in](http://www.mospi.gov.in)) and the National Data Warehouse of Official Statistics.

### **III. National Sample Survey Office (NSSO)**

The NSSO functions under the overall direction of National Statistical Commission with requisite independence and autonomy in the matter of collection, processing and publication of NSS data. The NSSO is headed by the Director General and Chief Executive Officer (DG & CEO), who is also the Member-Secretary of the Steering Committee.

The National Simple Survey Office (NSSO) conducts large scale sample surveys including socio-economic surveys, Annual Survey of Industries, collection of price data for rural and urban sectors etc. besides carrying out sample checks on area enumeration and crop estimation surveys and preparation of the urban frames useful in drawing of urban samples. The major activities of the NSSO pertain to Survey Design, Field Operations, Processing of NSSO data and Publication NSSO Reports.

### **IV. Statistical System in the States**

The Directorates of Economic and Statistics (DESS) in the States/UTs act as the nodal agencies for coordination of all statistical activities in the States/UTs. While the DES in most of the States/UTs have been formally declared by the State Governments as the Nodal Agencies on all statistical activities, the remaining few though not yet formally declared, continue to act as coordinating agency on statistical matters in the States /UT. Most of the States/UTs have District Statistical Offices (DSOs) which act as the field offices of the DESSs for collection and compilation of statistical data for the districts. The DESSs perform almost the same functions in the States/UTs as the NSO at the centre viz. bringing out some key statistics, coordination with the Central and State Statistical agencies, dissemination of statistics, etc.

### **V. Legal Support for Collection of Data**

Data collection in India has been largely based on a voluntary response except for the statutory support provided through the erstwhile "Collection of Statistics Act, 1953" to collect industrial data. This Act has since been amended as the new 'Collection of Statistics Act 2008' which is much more comprehensive to enable collection of various socio-economic data. The collection of Statistics Act 2008 is administered by the Ministry of Statistics and Programme Implementation while another Act viz. Census Act 1948 is administered by the Office of the Registrar General Of India under the Ministry of Home Affairs, to collect population and other demographic data. Besides the two important Acts, there are a number of other Acts, Rules and Procedures being administered by concerned subject Ministries/ Departments, to collect statutory administrative returns which help in generating different subject related data.

### **VI. Emerging challenges**

The Indian Statistical system has played an important role in facilitating informed decision-making, and greatly contributed to planned social and economic development in the country. A large variety of data is produced by the statistical system and extensive statistical data bases have been created which help in meeting the data requirements of not only the internal agencies but also the international agencies, besides a large number of other users such as researchers. The system is undergoing steady transformation to meet ever increasing information needs following challenges arising out of the globalization and liberalization of economy. It involves many significant structural and operational changes in the statistical system both at the Centre and in the State. It includes constitution of National Statistical Commission (NSC) to revamp the statistical system in the county with a view to improve the credibility, timeliness and adequacy of data. A comprehensive India Statistical Strengthening Project (ISSP) has been initiated with the collaboration of the World Bank to strengthen the statistical system in the states, in addition to an extensive programme undertaken to strengthen statistical capacity and infrastructure at sub-state level.

Further, keeping in view the need to modernize the statistical system, there is an increasing thrust on deploying latest information and communication technology in data collection, data management and data dissemination for

improving efficiency of statistical operations and activities. For example, e-collection of industrial and price data has been in operation already and e-system for the dissemination of various data including e-publication has been initiated to facilitate wider and speedier access of such data. Steps are also being taken to accelerate e-governance to engage citizen's directly in the process of data sector reforms. Indeed, the official statistical system is relentlessly gearing up to meet growing aspiration of different stakeholders in the emerging fast-changing environment by providing requisite data as reliably and timely as possible, besides undertaking appropriate measures to upgrade statistical skills and capacity through elaborate training programmes and promoting coordination between Central and State statistical agencies.

## Annexure - IV

# A Brief Overview of The Statistical System of China

Since its establishment, National Statistical System of the People's Republic of China has been developed and improved during the 60-year process of reform and adjustment to meet the demands for the new conditions and situation. The Statistical Law of the People's Republic of China stipulates that the State shall establish a centralized and unified statistical system, with a statistical administrative structure under unified leadership and with each level assuming responsibility for its own work.

The government statistical system comprises the government comprehensive statistical system and the government departmental statistical system. The government comprehensive statistical system is consisted of the statistical institutions established through a top-to-down model and relevant statistical staff from all the administrative levels. National Bureau of Statistics of China is established under the State Council, independent statistical institutions are established in local governments at and above the county level, and governments of townships and towns are staffed with full-time or part-time statisticians, who are responsible for the specific coordination and administration of the statistical work in their respective administrative areas. The government comprehensive statistical system adopts the management model as "unified leadership and decentralized administration"

### I. Government Comprehensive Statistical System

#### 1) National Bureau of Statistics of China

As an organ directly under the State Council, the National Bureau of Statistics of China (NBS) is responsible for directing and coordinating the statistical work throughout the country and national economic accounts. In the entire national statistical system, NBS is a main provider of national statistical data and a coordinator of the government departmental statistics and local statistics. Pursuant to the Statistics Law of the People's Republic of China, the main function of NBS is to be responsible for organizing, directing and coordinating the statistical work throughout the country, to formulate statistical policy and planning, basic national statistical system and unified statistical standards, approve the statistical standards of departments, draw up a plan or scheme for important general surveys of the national conditions and strength jointly with the departments concerned, organize and conduct the important general surveys of the national conditions and strength such as Population Census, Economic Census and Agricultural Census, organize and conduct the statistical survey of key industries of the economy, collect, aggregate, collate and provide the statistical data related to the surveys, and synthetically collate and provide the basic national statistical data, and to check, administer and publish the basic national statistical data and publish periodically the statistical data related to national economy and social development, and to administer the departmental and local statistical survey programs by law.

NBS has, divided by professional and function, set up 18 administrative units at departmental level, 2 institutions operating as administrative units, 10 institutions (in Beijing) and China Statistics Press directly under NBS. According to the needs of its work, NBS establishes Survey Offices in each province (municipality, autonomous region) and a survey team in each city (prefecture, autonomous prefecture and league) and in one-third of counties (cities at county level, districts and banners), which are as agent organs of NBS and vertically administrated under NBS, and are mainly responsible for the surveys of key statistical data required for the macroeconomic control and national accounts assigned by NBS mainly through sampling surveys.

#### 2) Local Bureau of Statistics

Independent statistical institutions are established in local governments at and above the county level, and statistical stations are established or statisticians are staffed in the people's governments of townships and towns, who are responsible for carrying out their tasks of State statistical surveys and for organizing, guiding and coordinating the statistical work in their respective administrative areas. The statistical institutions of local governments at various levels are subordinated to the dual leadership of the governments at their level and the statistical institutions at higher level, in terms of statistical work, mainly under the leadership of the statistical institutions at higher level.

## II. Departmental Statistical System

The ministries of the State Council and departments of local governments at various government levels do, according to the needs of their statistical work, establish statistical institutions and staffed with statisticians, forming a departmental statistical system. The main function of departmental statistical system is to organize and coordinate the statistical work within the departments, to execute the tasks of State and local statistical surveys, to draw up and carry out statistical survey plans within the departments and to collect, compile and provide statistical data, to make statistical analysis and exercise statistical supervision over the implementation of plans of the departments and of the enterprises or institutions under their jurisdiction. As a main system of statistical work, the national statistical system has the power to direct and coordinate the statistical work in the departmental statistical system.

## III. Statistical Laws and Regulations

Whether statistical institutions or statistical set-ups in enterprises and institutions, must comply with the national statistical laws and regulations and conduct statistical surveys according to the statistical indicator systems and statistical survey methodologies formulated by NBS.

Statistical legal system in China comprises the statistics law (“Statistics Law of the People’s Republic of China”), administrative regulations (including Regulations for Census and Regulations for Customs Statistics), administrative rules, regulatory documents (including the Interim Measures for Survey Programs of Departmental Statistics, the Measures for Administration on Foreign-Related Surveys and the Measures for Administration on Approval of Statistical Surveys) and local statistical regulations and rules. Pursuant to the Statistics Law of the People’s Republic of China, State statistical survey programs are worked out by NBS, or jointly with the relevant ministry or ministries of the State Council, and are submitted to the State Council for documentation, but important programs shall be reported to the State Council for examination and approval. Statistical survey programs of departments are worked out by the relevant ministries or departments of the State Council and are reported to the statistical institution at the same level for the documentation or examination and approval. Local statistical survey programs are worked out by statistical institutions of local governments at and above the county level, or by statistical institutions of local people’s governments at and above the county level jointly with the relevant department or departments, and shall all be reported to the statistical institution at the higher level for the documentation or examination and approval. In drawing up a plan for statistical survey programs, it is necessary to draw up simultaneously appropriate statistical survey system, which shall be reported for examination and approval or for the documentation. A statistical survey system shall stipulate survey objective, scope and coverage, methods, respondents, organization, forms or questionnaires, and submission and release of statistical data. A statistical survey shall be organized and conducted under a statistical survey system approved. Any change of the contents of statistical survey system shall be submitted to the original examination and approval authority for approval, or to the original registration authority for the documentation.

## IV. Statistical Survey

NBS collects statistical data mainly through periodical censuses and current statistical surveys, and sorts out statistical data through ad hoc surveys, typical surveys and administrative registry records. At present, the important general surveys of the national conditions and strength by NBS include Population Census, Agricultural Census and Economic Census, and 48 current statistical surveys, including national accounts, agriculture, industry, energy, investment, construction, trade and external economy, services, urban and rural households, price, society and science and technology, labor force, wages and salaries, are organized and conducted. These surveys cover main aspects of economy, society, population, environment and resources. The contents of both the censuses and surveys basically cover all the aspects concerning with economy, society, population, environment and resources.

The government departmental statistics involve traffic, tourism, finance, banking, import and export in customs, utilization of foreign capital, culture, education, health, science and technology, registry of permanent residence, social development, etc.

## V. Release and Provision of Statistical Information

In order to provide the official statistics and products on China to the whole society and international community more in quantity, shorter in time lag, and better in quality, NBS releases statistical survey data and supplies with value added products via statistical processing through various channels and in various ways. For the time being, a system of regular releases of statistical information has been established, including various well-arranged types, such as press conference, internet release, public data bank and publications, “Statistics Info” through WeChat, official mobile infor-

mation service platform and mainly varieties of yearbooks which enable the release and provision of statistical data and products more efficiently, widely and richer in content. In addition, the statistical institutions in 31 provinces, autonomous regions and municipalities, as well as many cities and counties have also formed their own relevant regular patterns for timely data release, which forms a hierarchical and widely covered layout for statistical data release and provision in China.

#### **VI. The Main Targets and Latest Development of China's Statistics**

The transformation of Chinese economy to the market system is under way with rapid and profound development, which has posed higher requirements on the China's statistical system. As to these all new requirements, the Chinese national statistical system is making its great efforts to enhance the statistical capacity, improve statistics quality and the credibility of official statistics, and to mend the pace of modern service-oriented statistics. Since 2012, in order to reform the statistical production modes, NBS has implemented the Four Major Programmes on industrial enterprises above designated size, wholesale and retail and catering businesses above designated size, qualified construction enterprises and real estate development enterprises. Up to now, a true and complete, timely updated business registry of establishments has taken into shape; a standardized system of integrated questionnaires for business surveys has been worked out; a comparatively convenient and applicable data collection and processing software has been developed; a comparatively safe and efficient online reporting system for business statistics has been set up and used all over China. The successful implementation of the Four Major Programmes symbolized the profound reform of the statistical production modes, and initially realized the whole processes from program design, task deployment, to data collection, processing, transmission, storage, processing for analysis electronically, efficiently and by intranet in our statistical work. In these four areas, the design of the survey programs and the task deployment are unified, the data collection and data sharing are monitored at various levels. The coverage of the Four Major Programmes will be continuously expanded, the service functions of the direct online reporting system will be actively developed, and a modernized service-oriented statistical system for users, for local statistical grassroots, and for survey respondents will be constructed in the national Statistical system of China.

# A Brief Overview of The Statistical System of South Africa

The South African Statistical system is nearly 100 years old, but has only served the needs of all its peoples for a relatively short period. The advent in 1994 of the democratic dispensation provided the production of statistics with two organizational model options for transformation. The first model was to centralize the production of most of the statistics into a single agency, the national statistical office (NSO) which was the then Central Statistical Service (CSS). The CSS was later transformed into Statistics South Africa (Stats SA) consisting of a head office and branches in the provinces, and much later on regional offices were established at sub-provincial level. The minority of the statistics excluded from centralization were largely of a financial nature such as the balance of payments. These would be generated by the relevant agencies including the South African Reserve Bank (SARB) and the National Treasury (NT). Indeed the feeling that centralization was the way to go was prevalent both within Stats SA and in other organs of state. The second model was to decentralize the production of most of the statistics whereby the various organs of state would produce statistics on the basis of their specialist subject areas. Naturally statistics-producing organs of state would constitute a statistical production system which would require coordination. The model ultimately adopted was a product of an evolutionary process. Statistical production faced four major pressures which overlapped in some areas. First was ideological transformation from a focus on "own affairs" of the apartheid political dispensation to a focus on integration of the total population and geography of the new state. This translated into transformation of the demographics of the CSS, integration of the Bantustan statistics offices into the CSS, and establishment of provincial CSS offices to facilitate data collection by head office. Second was the data gap facing the new government with regard to policy and programme development. Alleviation of poverty and inequality, especially service delivery, and the provision of developmental opportunities was unquestionably urgent. This provided the imperative for the 1996 census of population and housing. Third was the rationalization of the statistical series produced so they could be relevant to the aspirations of the citizenry. The rationalization included the introduction of the production of social statistics in addition to the existing economic statistics. Fourth was the drive to improve the quality of the statistics produced by the NSO.

Although they are still around at different levels of intensity, the pressures mentioned above were most intense during, and coincided with, the tenure (1995-99) of the first head of the CSS which later became Stats SA. During this period the transformation model of statistical production was the centralize done. However, overtime it had become increasingly clear that Stats SA had very limited capacity to cater for most statistical needs of users. In the same breath the potential of other organs of state for filling the gap between what Stats SA produced and what users needed was recognized. Acknowledgement of the current Statistics Act (No. 6 of 1999). The Act specifically provided for Statistician-General as executive head of Stats SA as well as coordinator of statistics produced by other organs of state. It was a land marking the production of statistics in the country because it defined a new direction for the strategic and work programmes of Stats SA as well as defining the role of other organs of state in the production of statistics. Incidentally the Act coincided with the change of name of the NSO from CSS to Stats SA.

In 2000 a new head took over the reins at Stats SA and immediately embarked on a new vision for statistical production in the county. Although the new vision was as yet to be formally defined, it was hinged on coordination of statistical production. A national Statistics Systems Division (NSSD) was established at Stat SA to tease out the co-ordination process. The NSS concept became a Cabinet Lekgotla of January 2002. Although the SANSS was included in the Programmes OF Action (POA) of the government, for the next eight years or so it lacked prominence especially at Stats SA for three main reasons. First was the relatively perennial capacity constraint. Second and most significant was the continued pressure to get Stats SA as an entity to work more effectively and efficiently with particular regard to the quality of its own products. The third was the challenge of change management.

It was not until 2009 that the NSS concept influenced the strategic direction of Stats SA. Since then the department's five-year strategic plan and the annual work programme have undergo a strategic shift that emphasizes implementation of statistical coordination as mandated by the Statistics Act [3, 4]. As its new vision and mission indicate, the department has assumed a leadership position by partnering with other organs of state to advance statistical development in the county. The shift has been widening of statistical production beyond the product of Stats SA to setting up a system to support other organs of state to produce statistics of good quality. The objectives of the shift are to expand the production of statistics in order to increase the supply of official statistics and to address the gap in statistical quality. Of the six strategic objectives of Stats SA, three directly address statistical coordination. The first objective is "to expand the information base by increasing its depth, breadth and geographic spread". The strategy is

to translate the government's 12 priority development outcomes identified in the Cabinet Lekgotla of 20-22 January 2010 [5] into Stats SA '10 statistical themes that constitute the universe of statistical production [3:30] (see Table 1). Strategic focus areas include health, education, safety and security, sustainable resource management, rural development, food security and land reform. The second objective is "to enhance public confidence and trust in statistics". Focus areas for this objective include developing a quality management system for the SANSS, setting standards for the SANSS, assessing statistics for quality and certifying them official where applicable, and development and maintenance of dwelling and business frames for standardizing data collection areas to enhance data comparability. The third objective is "to lead the development and coordination of statistical production within the SANSS". This is where the SANSS performs a transformation function of the fragmented statistical system to an integrated one focused on the production of official statistics.
